1 About this document

1.1 Function

This instruction provides all the information you need for mounting, connection and setup as well as important instructions for maintenance, fault rectification, the exchange of parts and the safety of the user. Please read this information before putting the instrument into operation and keep this manual accessible in the immediate vicinity of the device.

1.2 Target group

This operating instructions manual is directed to trained personnel. The contents of this manual must be made available to the qualified personnel and implemented.

1.3 Symbols used

Document ID
This symbol on the front page of this instruction refers to the Document ID. By entering the Document ID on www.vega.com you will reach the document download.

Information, note, tip: This symbol indicates helpful additional information and tips for successful work.

Note: This symbol indicates notes to prevent failures, malfunctions, damage to devices or plants.

Caution: Non-observance of the information marked with this symbol may result in personal injury.

Warning: Non-observance of the information marked with this symbol may result in serious or fatal personal injury.

Danger: Non-observance of the information marked with this symbol results in serious or fatal personal injury.

Ex applications
This symbol indicates special instructions for Ex applications.

• **List**
The dot set in front indicates a list with no implied sequence.

1 **Sequence of actions**
Numbers set in front indicate successive steps in a procedure.

Disposal
This symbol indicates special instructions for disposal.

2 For your safety

2.1 Authorised personnel

All operations described in this documentation must be carried out only by trained, qualified personnel authorised by the plant operator.

During work on and with the device, the required personal protective equipment must always be worn.

2.2 Appropriate use

VEGACAL 69 is a sensor for continuous level measurement.

You can find detailed information about the area of application in chapter "*Product description*".

Operational reliability is ensured only if the instrument is properly used according to the specifications in the operating instructions manual as well as possible supplementary instructions.

2.3 Warning about incorrect use

Inappropriate or incorrect use of this product can give rise to application-specific hazards, e.g. vessel overfill through incorrect mounting or adjustment. Damage to property and persons or environmental contamination can result. Also, the protective characteristics of the instrument can be impaired.

2.4 General safety instructions

This is a state-of-the-art instrument complying with all prevailing regulations and directives. The instrument must only be operated in a technically flawless and reliable condition. The operator is responsible for the trouble-free operation of the instrument. When measuring aggressive or corrosive media that can cause a dangerous situation if the instrument malfunctions, the operator has to implement suitable measures to make sure the instrument is functioning properly.

The safety instructions in this operating instructions manual, the national installation standards as well as the valid safety regulations and accident prevention rules must be observed by the user.

For safety and warranty reasons, any invasive work on the device beyond that described in the operating instructions manual may be carried out only by personnel authorised by the manufacturer. Arbitrary conversions or modifications are explicitly forbidden. For safety reasons, only the accessory specified by the manufacturer must be used.

To avoid any danger, the safety approval markings and safety tips on the device must also be observed.

2.5 Conformity

The device complies with the legal requirements of the applicable country-specific directives or technical regulations. We confirm conformity with the corresponding labelling.

The corresponding conformity declarations can be found on our homepage.

2.6 NAMUR recommendations

NAMUR is the automation technology user association in the process industry in Germany. The published NAMUR recommendations are accepted as the standard in field instrumentation.

The device fulfils the requirements of the following NAMUR recommendations:

- NE 21 – Electromagnetic compatibility of equipment
- NE 43 – Signal level for fault information from measuring transducers
- NE 53 – Compatibility of field devices and display/adjustment components

For further information see www.namur.de.

2.7 Installation and operation in the USA and Canada

This information is only valid for USA and Canada. Hence the following text is only available in the English language.

Installations in the US shall comply with the relevant requirements of the National Electrical Code (NEC - NFPA 70) (USA).

Installations in Canada shall comply with the relevant requirements of the Canadian Electrical Code (CEC Par I) (Canada).

2.8 Safety instructions for Ex areas

For applications in explosion-proof areas (Ex), only devices with corresponding Ex approval may be used. Observe the Ex-specific safety instructions. These are an integral part of the operating instructions and are enclosed with every device with Ex approval.

2.9 Environmental instructions

Protection of the environment is one of our most important duties. That is why we have introduced an environment management system with the goal of continuously improving company environmental protection. The environment management system is certified according to DIN EN ISO 14001.

Please help us fulfil this obligation by observing the environmental instructions in this manual:

- Chapter " *Packaging, transport and storage*"
- Chapter " *Disposal*"

3   Product description

3.1   Configuration

Scope of delivery

The scope of delivery encompasses:

● Level sensor VEGACAL 69

The further scope of delivery encompasses:

● Documentation
  – Operating instructions VEGACAL 69
  – Instructions for optional instrument features
  – Ex-specific " *Safety instructions*" (with Ex versions)
  – If necessary, further certificates

Information:
Optional instrument features are also described in this operating instructions manual. The respective scope of delivery results from the order specification.

Scope of this operating instructions

This operating instructions manual applies to the following instrument versions:

● Hardware from 1.0.0
● Software from 1.3.0
● Only for instrument versions without SIL qualification

Constituent parts

The VEGACAL 69 consists of the components:

● Process fitting with probe
● Housing with electronics
● Housing cover, optionally available with display and adjustment module

Fig. 1: VEGACAL 69 - double rod probe with plastic housing

1   Housing lid with integrated display and adjustment module (optional)
2   Housing with electronics
3   Process fitting

VEGA

Type label

The type label contains the most important data for identification and use of the instrument:

Fig. 2: Layout of the type label (example)

1 Instrument type
2 Product code
3 Approvals
4 Process and ambient temperature, process pressure
5 Power supply and signal output, electronics
6 Protection rating
7 Probe length
8 Order number
9 Serial number of the instrument
10 Material wetted parts
11 Symbol of the device protection class
12 Reminder to observe the instrument documentation
13 ID numbers, instrument documentation
14 Notified authority for CE marking
15 Approval directives

With the serial number, you can access the delivery data of the instrument via " www.vega.com", " *Search*". You can find the serial number on the inside of the instrument as well as on the type label on the outside.

Serial number - Instrument search

The type label contains the serial number of the instrument. With it you can find the following instrument data on our homepage:

● Product code (HTML)
● Delivery date (HTML)
● Order-specific instrument features (HTML)
● Operating instructions and quick setup guide at the time of shipment (PDF)
● Test certificate (PDF) - optional

Move to " www.vega.com" and enter in the search field the serial number of your instrument.

Alternatively, you can access the data via your smartphone:

● Download the VEGA Tools app from the " *Apple App Store*" or the " *Google Play Store*"
● Scan the QR-code on the type label of the device or
● Enter the serial number manually in the app

3.2 Principle of operation

Application area

VEGACAL 69 is a level sensor for continuous level measurement of liquids in non-conductive vessels or of corrosive liquids.

The double rod probe is fully insulated and highly resistant.

Functional principle

Probes and measured product form an electrical capacitor. The capacitance is influenced by three main factors.

Fig. 3: Functional principle - Plate capacitor

1   Distance between the electrode surfaces
2   Size of the electrode surfaces
3   Type of dielectric between the electrodes

The two probes are the capacitor plates. The measured product is the dielectric. Due to the higher dielectric constant of the product compared to air, the capacitance increases as the material gradually covers the probe.

The capacitance as well as the resistance change are converted by the electronics module into a level-proportional signal.

Power supply and bus communication

Power is supplied via the H1 Fieldbus. A two-wire cable according to Fieldbus specification serves as carrier of both power and digital data for multiple sensors. This cable can be operated in two versions:

● via an H1 interface card in the control system and additional power supply
● via a Linking device with HSE (High speed Ethernet) and additional power supply according to IEC 61158-2

DD/CFF

The DD (Device Descriptions) and CFF (capability files) necessary for planning and configuration of your FF (Foundation Fieldbus) communication network are available in the download area of the VEGA homepage www.vega.com. The appropriate certificates are also available there. A CD with the appropriate files and certificates can be ordered via e-mail under info@de.vega.com or by phone from one of the VEGA agencies under the order number "DRIVER.S".

The backlight of the display and adjustment module is powered by the sensor. Prerequisite is a certain level of operating voltage.

The data for power supply are specified in chapter " *Technical data*".

The optional heating requires its own operating voltage. You can find further details in the supplementary instructions manual " *Heating for display and adjustment module*".

This function is generally not available for approved instruments.

3.3 Adjustment

The instrument can be adjusted with the following adjustment media:

● With the display and adjustment module
● with the suitable VEGA DTM in conjunction with an adjustment software according to the FDT/DTM standard, e.g. PACTware and PC
● A configuration tool

3.4 Packaging, transport and storage

Packaging

Your instrument was protected by packaging during transport. Its capacity to handle normal loads during transport is assured by a test based on ISO 4180.

The packaging of standard instruments consists of environment-friendly, recyclable cardboard. For special versions, PE foam or PE foil is also used. Dispose of the packaging material via specialised recycling companies.

Transport

Transport must be carried out in due consideration of the notes on the transport packaging. Nonobservance of these instructions can cause damage to the device.

Transport inspection

The delivery must be checked for completeness and possible transit damage immediately at receipt. Ascertained transit damage or concealed defects must be appropriately dealt with.

Storage

Up to the time of installation, the packages must be left closed and stored according to the orientation and storage markings on the outside.

Unless otherwise indicated, the packages must be stored only under the following conditions:

● Not in the open
● Dry and dust free
● Not exposed to corrosive media
● Protected against solar radiation
● Avoiding mechanical shock and vibration

Storage and transport temperature

● Storage and transport temperature see chapter " *Supplement - Technical data - Ambient conditions*"
● Relative moisture 20 … 85 %

Lifting and carrying

With instrument weights of more than 18 kg (39.68 lbs) suitable and approved equipment must be used for lifting and carrying.

31180-EN-230510

3.5 Accessories

The instructions for the listed accessories can be found in the download area on our homepage.

Display and adjustment module

The display and adjustment module is used for measured value indication, adjustment and diagnosis.

The integrated Bluetooth module (optional) enables wireless adjustment via standard adjustment devices.

VEGACONNECT

The interface adapter VEGACONNECT enables the connection of communication-capable instruments to the USB interface of a PC.

VEGADIS 81

The VEGADIS 81 is an external display and adjustment unit for VEGA plics® sensors.

VEGADIS 82

VEGADIS 82 is suitable for measured value indication and adjustment of sensors with HART protocol. It is looped into the 4 … 20 mA/HART signal cable.

PLICSMOBILE T81

The PLICSMOBILE T81 is an external GSM/GPRS/UMTS radio unit for transmission of measured values and for remote parameter adjustment of HART sensors.

External housing

If the standard sensor housing is too big or in case of strong vibrations, an external housing can be used.

Then the sensor housing is made of stainless steel. The electronics is located in the external housing which can be mounted in a distance of up to 10 m (32.8 ft) to the sensor by using a connection cable.

Three different external sensor housings are available.
Fig. 4: External housing

A   Instrument housing
1   Sensor housing, stainless steel (316L), IP68 (10 bar)
2   Sensor housing, stainless steel (316L), IP67
3   Sensor housing, stainless steel (316L), BNC plug IP54

Protective cover   The protective cover protects the sensor housing against soiling and intense heat from solar radiation.

Flanges   Screwed flanges are available in different versions according to the following standards: DIN 2501, EN 1092-1, BS 10, ASME B 16.5, JIS B 2210-1984, GOST 12821-80.

4 Mounting

4.1 General instructions

Process conditions

⚠ **Note:**
For safety reasons, the instrument must only be operated within the permissible process conditions. You can find detailed information on the process conditions in chapter " *Technical data*" of the operating instructions or on the type label.

Hence make sure before mounting that all parts of the instrument exposed to the process are suitable for the existing process conditions.

These are mainly:

● Active measuring component
● Process fitting
● Process seal

Process conditions in particular are:

● Process pressure
● Process temperature
● Chemical properties of the medium
● Abrasion and mechanical influences

Installation position

Select an installation position you can easily reach for mounting and connecting as well as later retrofitting of a display and adjustment module. The housing can be rotated by 330° without the use of any tools. You can also install the display and adjustment module in four different positions (each displaced by 90°).

Screwing in

Devices with threaded fitting are screwed into the process fitting with a suitable wrench via the hexagon.

See chapter " *Dimensions*" for wrench size.

⚠ **Warning:**
The housing or the electrical connection may not be used for screwing in! Depending on the device version, tightening can cause damage, e. g. to the rotation mechanism of the housing.

Welding work

Before beginning the welding work, remove the electronics module from the sensor. By doing this, you avoid damage to the electronics through inductive coupling.

Ground the probe before welding directly on the rod or cable.

Protection against moisture

Use the recommended cables (see chapter " *Connecting to power supply*") and tighten the cable gland.

You can give your instrument additional protection against moisture penetration by leading the connection cable downward in front of the cable gland. Rain and condensation water can thus drain off. This applies mainly to outdoor mounting as well as installation in areas where high humidity is expected (e.g. through cleaning processes) or on cooled or heated vessels.

To maintain the housing protection, make sure that the housing lid is closed during operation and locked, if necessary.

Fig. 5: Measures against moisture ingress

Pressure/Vacuum

The process fitting must be sealed if there is gauge or low pressure in the vessel. Before use, check if the sealing material is resistant against the measured product and the process temperature.

The max. permissible pressure is specified in chapter " *Technical data*" or on the type label of the sensor.

Cable entries - NPT thread
Cable glands

Metric threads
In the case of instrument housings with metric thread, the cable glands are screwed in at the factory. They are sealed with plastic plugs as transport protection.

You have to remove these plugs before electrical connection.

NPT thread
In the case of instrument housings with self-sealing NPT threads, it is not possible to have the cable entries screwed in at the factory. The free openings for the cable glands are therefore covered with red dust protection caps as transport protection.

Prior to setup you have to replace these protective caps with approved cable glands or close the openings with suitable blind plugs.

4.2 Mounting instructions

Inflowing medium

If the instrument is mounted in the filling stream, unwanted false measurement signals can be generated. For this reason, mount the instrument at a position in the vessel where no disturbances, e.g. from filling openings, agitators, etc., can occur.

This applies particularly to instrument versions with a longer probe.

VEGACAL 69 • Foundation Fieldbus

Fig. 6: Inflowing medium

5 Connecting to power supply

5.1 Preparing the connection

Safety instructions

Always keep in mind the following safety instructions:

● Carry out electrical connection by trained, qualified personnel authorised by the plant operator
● If overvoltage surges are expected, overvoltage arresters should be installed

⚠ **Warning:**
Only connect or disconnect in de-energized state.

Voltage supply

The instrument requires a operating voltage of 9 … 32 V DC. Operating voltage and the digital bus signal are carried on the same two-wire connection cable. Power is supplied via the H1 power supply.

Connection cable

Connection is carried out with shielded cable according to Fieldbus specification.

Use cable with round cross section for instruments with housing and cable gland. To ensure the seal effect of the cable gland (IP protection rating), find out which cable outer diameter the cable gland is suitable for.

Use a cable gland fitting the cable diameter.

Make sure that the entire installation is carried out according to the Fieldbus specification. In particular, make sure that the bus is terminated with suitable terminating resistors.

Cable glands

Metric threads:
In the case of instrument housings with metric thread, the cable glands are screwed in at the factory. They are sealed with plastic plugs as transport protection.

ℹ **Note:**
You have to remove these plugs before electrical connection.

NPT thread:
In the case of instrument housings with self-sealing NPT threads, it is not possible to have the cable entries screwed in at the factory. The free openings for the cable glands are therefore covered with red dust protection caps as transport protection.

ℹ **Note:**
Prior to setup you have to replace these protective caps with approved cable glands or close the openings with suitable blind plugs.

On plastic housings, the NPT cable gland or the Conduit steel tube must be screwed into the threaded insert without grease.

Max. torque for all housings, see chapter " *Technical data*".

Cable screening and grounding

Make sure that the cable screen and grounding are carried out according to Fieldbus specification. We recommend to connect the cable screening to ground potential on both ends.

In systems with potential equalisation, connect the cable screening directly to ground potential at the power supply unit, in the connection box and at the sensor. The screen in the sensor must be connected directly to the internal ground terminal. The ground terminal outside on the housing must be connected to the potential equalisation (low impedance).

5.2 Connection procedure

Proceed as follows:

1. Unscrew the housing lid

2. If a display and adjustment module is installed, remove it by turning it to the left

3. Loosen compression nut of the cable gland and remove blind plug

4. Remove approx. 10 cm (4 in) of the cable mantle, strip approx. 1 cm (0.4 in) of insulation from the ends of the individual wires

5. Insert the cable into the sensor through the cable entry

6. Lift the opening levers of the terminals with a screwdriver (see following illustration)

7. Insert the wire ends into the open terminals according to the wiring plan

Fig. 7: Connection steps 6 and 7

8. Press down the opening levers of the terminals, you will hear the terminal spring closing

9. Check the hold of the wires in the terminals by lightly pulling on them

10. Connect the shielding to the internal ground terminal, connect the external ground terminal to potential equalisation

11. Tighten the compression nut of the cable entry gland. The seal ring must completely encircle the cable

12. Screw the housing lid back on

The electrical connection is finished.

5.3 Wiring plan - single chamber housing

6 Set up with the display and adjustment module PLICSCOM

6.1 Short description

Function/Configuration

The display and adjustment module is used for measured value display, adjustment and diagnosis. It can be mounted in the following housing versions and instruments:

● All sensors of the plics® instrument family, in the single as well as in the double chamber housing (optionally in the electronics or connection compartment)
● External display and adjustment unit VEGADIS 61

6.2 Insert display and adjustment module

Mount/dismount display and adjustment module

The display and adjustment module can be inserted into the sensor and removed again at any time. It is not necessary to interrupt the voltage supply.

Proceed as follows:

1. Unscrew the housing lid
2. Place the display and adjustment module in the desired position on the electronics (four positions in 90° offset can be selected) and turn to the right until it clicks into place.
3. Screw housing lid with inspection window tightly back on

Disassembly is carried out in reverse order.

The display and adjustment module is powered by the sensor, an additional connection is not necessary.

Fig. 20: Insert display and adjustment module in the single chamber housing

VEGA

> **Note:**
> If you intend to retrofit the instrument with a display and adjustment
> module for continuous measured value indication, a higher lid with an
> inspection glass is required.

6.3 Adjustment system
Fig. 21: Display and adjustment elements

1 LC display
2 Indication of the menu item number
3 Adjustment keys

Key functions

● *[OK]* key:
  – Move to the menu overview
  – Confirm selected menu
  – Edit parameter
  – Save value

● *[->]* key to select:
  – Menu change
  – Select list entry
  – Select editing position

● *[+]* key:
  – Change value of the parameter

● *[ESC]* key:
  – Interrupt input
  – Jump to next higher menu

Adjustment system

The instrument is operated via the four keys of the display and
adjustment module. The individual menu items are shown on the LC
display. You can find the function of the individual keys in the previous
illustration.

Time functions

When the *[+]* and *[->]* keys are pressed quickly, the edited value,
or the cursor, changes one value or position at a time. If the key is
pressed longer than 1 s, the value or position changes continuously.

When the *[OK]* and *[ESC]* keys are pressed simultaneously for more
than 5 s, the display returns to the main menu. The menu language is
then switched over to " *English*".

VEGACAL 69 • Foundation Fieldbus

Approx. 60 minutes after the last pressing of a key, an automatic reset to measured value indication is triggered. Any values not confirmed with **[OK]** will not be saved.

6.4 Setup steps

Switch-on phase

After VEGACAL 69 is connected to voltage supply or after voltage recurrence, the instrument carries out a self-check for approx. 30 seconds. The following steps are carried out:

● Internal check of the electronics
● Indication of the instrument type, the firmware as well as the sensor TAGs (sensor designation)
● Status byte goes briefly to fault value

Then the current measured value will be displayed and the corresponding digital output signal will be output to the cable. [1]

Parameter adjustment

VEGACAL 69 measures the capacitance of the respective product. To display the actual level of the product, an allocation of the measured capacitance to the percentage height must be carried out. For this adjustment, the capacitance is entered with emptied and filled vessel.

If the vessel cannot be emptied or filled completely, you can carry out the adjustment also with two known levels - for example with 10 % and 90 %. The difference between the empty and full adjustment values should be as large as possible.

The actual level can then be calculated on the basis of these settings.

VEGACAL 69 must be installed. A change of level is necessary for this adjustment.

In the main menu item " *Basic adjustment*", the individual submenu items should be selected one after the other and provided with the correct parameter values.

Tip:
If the display and adjustment module remains on the probe as a display, we recommend saving the sensor data in the display and adjustment module.

Use the function "Copy sensor data".

Start your parameter adjustment with the following menu items of the basic adjustment:

Carry out min. adjustment

To be on the safe side, note the adjustment values for full and empty. If an adjustment procedure fails, it is not necessary to again carry out a level change.

These values can be helpful if the electronics has to be exchanged.

	%	Value
Empty adjustment		
Full adjustment		

[1] The values correspond to the actual measured level as well as to the settings already carried out, e.g. default setting.

VEGA

Tab. 1: Adjustment protocol

ℹ Tip:
For min. adjustment the vessel should be as empty as possible, and for max. adjustment, as full as possible. If the vessel is already full, start with max. adjustment.

ℹ Note:
If possible, the vessel should be as empty as possible for min. adjustment.

Proceed as follows:

1. Move from the measured value display to the main menu by pushing *[OK]*.

> Basic adjustment
> Display
> Diagnostics
> Service
> Info
2. Select the menu item " *Basic adjustment*" with *[->]* and confirm with *[OK]*. Now the menu item " *Min. adjustment*" is displayed.
> Min. adjustment
> **0.00 %**
> =
> **0.0 pF**
>   54.5 pF

3. Prepare the adjustment value for editing with *[OK]*. Move to the selection window with *[OK]*.

> Min. adjustment
> Accept current measured
> value?
> **Accept?**
> **Edit?**
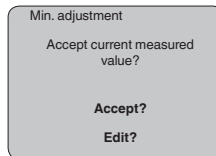

4. Accept the current measured value or move to the editing window with "Edit". To edit, set the cursor to the requested position with *[->]*. Set the requested % value with *[+]* and save with *[OK]*. The cursor jumps to the capacitance value.

5. Enter the current capacitance value in pF (displayed below) for the empty vessel corresponding to the percentage value.

6. Save the settings with *[OK]* and move to "Max. adjustment" with *[->]*.

Carry out max. adjustment

Fill the vessel to the highest possible level.

ℹ Note:
For max. adjustment, the vessel should be as full as possible. This will make the calibration more accurate.

VEGACAL 69 • Foundation Fieldbus

Proceed as follows:

Max. adjustment

100.00 %

=

1000 pF

327.4 pF

1. Prepare the adjustment value for editing with *[OK]*. Move to the selection window with *[OK]*.

Min. adjustment

Accept current measured value?

Accept?

Edit?

2. Accept the current measured value or move to the editing window with "Edit". To edit, set the cursor to the requested position with *[->]*. Set the requested % value with *[+]* and save with *[OK]*. The cursor jumps to the capacitance value.

3. Enter the current capacitance value in pF (displayed below) for the full vessel corresponding to the percentage value.

4. Save the settings with *[OK]*.

Basic adjustment - Damping

To suppress fluctuations in the measured value display, e. g. caused by an agitated medium surface, a damping can be set. This time can be between 0 and 999 seconds. Keep in mind that the reaction time of the entire measurement will then be longer and the sensor will react to measured value changes with a delay. In general, a period of a few seconds is sufficient to smooth the measured value display.
Damping

0 s

Enter the requested parameters via the appropriate keys, save your settings and jump to the next menu item with the *[->]* key.

Basic adjustment - Linearization curve

A linearisation is necessary for all vessels in which the vessel volume does not increase linearly with the level - e.g. in a horizontal cylindrical or spherical tank - and the indication or output of the volume is required. Corresponding linearisation curves are preprogrammed for these vessels. They represent the correlation between the level percentage and vessel volume. By activating the appropriate curve, the volume percentage of the vessel is displayed correctly. If the volume should not be displayed in percent but e.g. in l or kg, a scaling can be also set in the menu item " *Display*".
VEGA

Linearisation curve

Linear

Enter the requested parameters via the appropriate keys, save your settings and jump to the next menu item with the *[->]* key.

Menu section, display

Display - Indicated value

Radar, guided microwave and ultrasonic sensors deliver the following measured values:

● SV1 (Secondary Value 1): Percentage value after the adjustment
● SV2 (Secondary Value 2): Distance value before the adjustment
● PV (Primary Value): Linearised percentage value
● AI FB1 (Out)

In the menu item " *Display*" you can define which value should be indicated on the display.

Displayed value

AI-Out
Display - Backlight

A background lighting integrated by default can be adjusted via the adjustment menu. The function depends on the height of the supply voltage. See " *Technical data/Voltage supply*".

To maintain the function of the device, the lighting is temporarily switched off if the power supply is insufficient.

Backlight

In the default setting, the lightning is switched off.

Diagnosis - Peak indicator

The respective min. and max. measured values are saved in the sensor. The values are displayed in the menu item " *Peak indicator*".

● Min. and max. distance in m(d)
● Min. and max. temperature

Peak indicator
Diagnostics - Device status

The instrument status is displayed in this menu item. If no failure is detected by the sensor, "*OK*" will be displayed. If a failure is detected, there will be a sensor-specific flashing fault signal, for example "*E013*". The failure is also displayed in clear text, for example "*No measured value available*".

ⓘ Information:
The fault message as well as the clear text indication are also carried out in the measured value display.

Measurement reliability

Device status
Trend recording

Up to 3000 measured values are recorded (depending on the sensor) when starting a "**Trend curve**". Then the values can be displayed on a time axis. The oldest measured values are always deleted.

The measured values displayed are in the unit pF.

Trend recording

Presentation of the trend curve
ⓘ Information:
The trend recording is not activated when being shipped. It must be started by the user via the menu item "*Start trend curve*".

Service - Simulation

In this menu item you simulate a user-defined level or pressure value via the current output. This allows you to test the signal path, e.g. through connected indicating instruments or the input card of the control system.

The following simulation variables are available:

- Percent
- Current
- Pressure (with pressure transmitters)
- Distance (with radar and guided radar (GWR))

With Profibus PA sensors, the selection of the simulated value is made via the "Channel" in the menu "*Basic adjustments*".

How to start the simulation:

1. Push *[OK]*
2. Select the requested simulation variable with *[->]* and confirm with *[OK]*.
3. Set the requested numerical value with *[+]* and *[->]*.
4. Push *[OK]*

The simulation is now running, with 4 … 20 mA/HART a current is output and with Profibus PA or Foundation Fieldbus a digital value.

How to interrupt the simulation:

→ Push *[ESC]*

Information:
The simulation is automatically terminated 10 minutes after the last pressing of a key.

Simulation

Start simulation?
Reset

Basic adjustment
If the function " *Reset*" is carried out, the sensor resets all settings to default.

The following values will be reset:

Function	Reset value
Max. adjustment	3000 pF
Min. adjustment	0 pF
Damping ti	0 s
Linearisation	Linear
Sensor-TAG	Sensor
Display	AI-Out 1

Special parameters
All special parameters are reset to delivery status.

Peak indicator
The min. and max. values are reset to the actual value.

Service - Language

The sensor is already set to the ordered national language. In this menu item you can change the language. The following languages are available as of software version 3.50:

● Deutsch
● English
● Français
● Espanõl
● Pycckuu
● Italiano
● Netherlands
● Japanese
● Chinese

Language
German

Copy sensor data   With this function

- Load parameter adjustment data from the sensor into the display and adjustment module
- Write parameter adjustment data from the display and adjustment module into the sensor

The data are permanently saved in an EEPROM memory in the display and adjustment module and remain there even in case of power failure. From there, they can be written into one or several sensors or kept as backup for a possible sensor exchange.

The type and the volume of the copied data depend on the respective sensor.

ⓘ Information:
Before data are written into the sensor, a check is carried out to determine whether the data fit the sensor. If the data do not fit, a fault signal is triggered or the function is blocked. When writing data into the sensor, you will see which instrument type the data originate from and which TAG number this sensor had.

The following items are checked:

- Software version
- WHG approval
- SIL activated
- Measuring principle
- Signal output

Copy sensor data
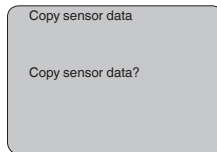

Copy sensor data?

Service - PIN   In this menu item, the PIN is activated/deactivated permanently. Entering a 4-digit PIN protects the sensor data against unauthorized access and unintentional modifications. If the PIN is activated permanently, it can be deactivated temporarily (i.e. for approx. 60 min.) in any menu item. The instrument is delivered with the PIN set to 0000.

PIN

Activate permanently?
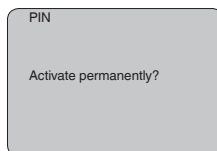

Only the following functions are permitted with activated PIN:

● Select menu items and show data
● Read data from the sensor into the display and adjustment module

Menu section, info

Info

In this menu item the most important sensor information can be displayed:

● Instrument type
● Serial number: 8-digit number, e.g. 12345678

6.6 Saving the parameterisation data

On paper

We recommended writing down the adjustment data, e.g. in this operating instructions manual, and archiving them afterwards. They are thus available for multiple use or service purposes.

In the display and adjustment module

If the instrument is equipped with a display and adjustment module, the parameter adjustment data can be saved in it. The data remain

VEGACAL 69 • Foundation Fieldbus

permanently stored there even if the sensor supply fails. The proce-
dure is described in menu item " *Copy sensor data*".

7 Set up with PACTware and other adjustment programs

7.1 Connect the PC

VEGACONNECT directly on the sensor
Fig. 22: Connection of the PC directly to the sensor via the interface adapter VEGACONNECT

1 USB cable to the PC
2 Interface adapter VEGACONNECT
3 Sensor

VEGACONNECT externally

Fig. 23: Connection via interface adapter VEGACONNECT external

1 I²C bus (com.) interface on the sensor
2 I²C connection cable of VEGACONNECT
*3 Interface adapter VEGACONNECT*
4 USB cable to the PC

Necessary components:

● VEGACAL 69

- PC with PACTware and suitable VEGA DTM
- VEGACONNECT
- Power supply unit or processing system

7.2 Parameter adjustment with PACTware

Prerequisites

For parameter adjustment of the instrument via a Windows PC, the configuration software PACTware and a suitable instrument driver (DTM) according to FDT standard are required. The latest PACTware version as well as all available DTMs are compiled in a DTM Collection. The DTMs can also be integrated into other frame applications according to FDT standard.

i **Note:**
To ensure that all instrument functions are supported, you should always use the latest DTM Collection. Furthermore, not all described functions are included in older firmware versions. You can download the latest instrument software from our homepage. A description of the update procedure is also available in the Internet.

Further setup steps are described in the operating instructions manual " *DTM Collection/PACTware*" attached to each DTM Collection and which can also be downloaded from the Internet. Detailed descriptions are available in the online help of PACTware and the DTMs.
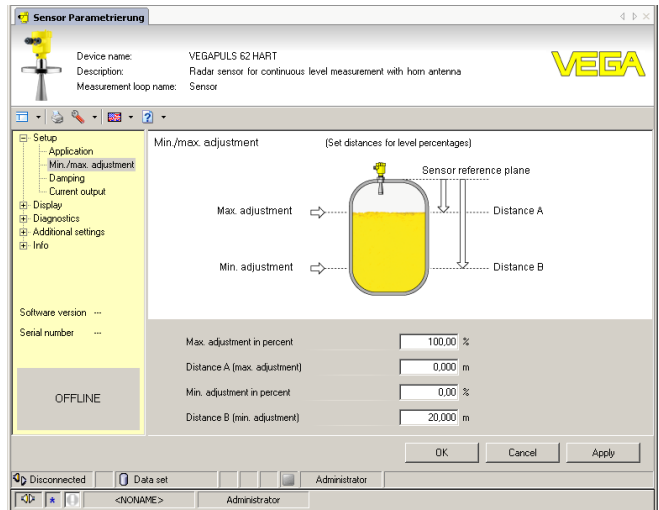

Fig. 24: Example of a DTM view

Standard/Full version

All device DTMs are available as a free-of-charge standard version and as a full version that must be purchased. In the standard version, all functions for complete setup are already included. An assistant for simple project configuration simplifies the adjustment considerably. Saving/printing the project as well as import/export functions are also part of the standard version.

In the full version there is also an extended print function for complete project documentation as well as a save function for measured value and echo curves. In addition, there is a tank calculation program as well as a multiviewer for display and analysis of the saved measured value and echo curves.

The standard version is available as a download under www.vega.com/downloads. The full version is available on CD from the agency serving you.

7.3 Parameter adjustment with AMS™ and PDM

For VEGA sensors, instrument descriptions for the adjustment programs AMS™ and PDM are available as DD or EDD. The instrument descriptions are already implemented in the current versions of AMS™ and PDM.

For older versions of AMS™ and PDM, a free-of-charge download is available via Internet. Move to www.vega.com.

7.4 Saving the parameterisation data

It is recommended to document or save the parameter adjustment data. That way they are available for multiple use or service purposes.

The VEGA DTM Collection and PACTware in the licensed, professional version provide suitable tools for systematic project documentation and storage.

8   Set up with smartphone/tablet/PC/notebook via Bluetooth

8.1   Preparations

Make sure that the Bluetooth function of the display and adjustment module is activated. For this, the switch on the bottom side must be set to " *On*".
Fig. 25: Activate Bluetooth

1   Bluetooth switch
On Bluetooth active
Off Bluetooth not active

Change sensor PIN

The security concept of Bluetooth operation absolutely requires that the default setting of the sensor PIN be changed. This prevents unauthorized access to the sensor.

The default setting of the sensor PIN is " **0000**". First of all you have to change the sensor PIN in the adjustment menu of the respective sensor, e.g. to " **1111**".

Use " *OK*" to switch to the input menu.

Basic adjustment

PIN

Deactivate permanently?

VEGA

```
┌──────────────────────┐
│ PIN                  │
│                      │
│         0000         │
│                      │
└──────────────────────┘
```

Change the PIN, e.g. to " **1111**".

```
┌──────────────────────┐
│ PIN                  │
│                      │
│         1111         │
│                      │
└──────────────────────┘
```

```
┌──────────────────────┐
│ PIN                  │
│                      │
│       Deactivated    │
│                      │
└──────────────────────┘
```
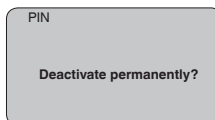

This permanently deactivates the PIN.

The display immediately changes to PIN activation.

Press " *ESC*" to cancel the activation of the PIN.

With " *OK*" you can enter and activate a PIN.

```
┌──────────────────────┐
│ PIN                  │
│                      │
│        Enable?       │
│                      │
└──────────────────────┘
```

```
┌──────────────────────┐
│ PIN                  │
│                      │
│        Activated     │
│                      │
└──────────────────────┘
```
After the sensor PIN has been changed, sensor adjustment can be enabled again. For access (authentication) with Bluetooth, the modified PIN is still effective.

● **Information:**
▪ Bluetooth communication functions only if the actual sensor PIN differs from the default setting " **0000**".

8.2 Connecting

Preparations

Smartphone/Tablet
Start the adjustment app and select the function "Setup". The smartphone/tablet searches automatically for Bluetooth-capable instruments in the area.

PC/Notebook
Start PACTware and the VEGA project assistant. Select the device search via Bluetooth and start the search function. The device automatically searches for Bluetooth-capable devices in the vicinity.

Connecting   The message " *Searching …*" is displayed.

All found instruments will be listed in the adjustment window. The search is continued automatically.

Select the requested instrument in the device list.

The message " *Connecting …*" is displayed.

Authenticate   For the first connection, the operating device and the sensor must authenticate each other. After successful authentication, the next connection functions without authentication.

For authentication, enter in the next menu window the 4-digit sensor PIN.

8.3   Sensor parameter adjustment

The sensor parameterization is carried out via the adjustment app on the smartphone/tablet or the DTM on the PC/notebook.
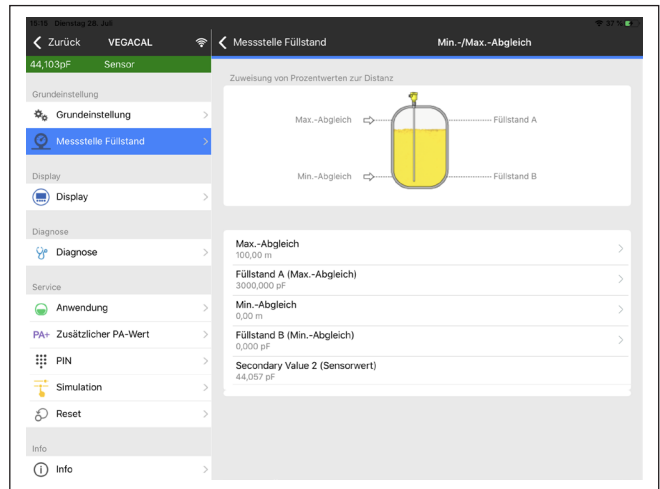

App view

Fig. 26: Example of an app view - Setup sensor adjustment

9 Diagnostics and servicing

9.1 Maintenance

Maintenance

If the device is used properly, no special maintenance is required in normal operation.

Cleaning

The cleaning helps that the type label and markings on the instrument are visible.

Take note of the following:

● Use only cleaning agents which do not corrode the housings, type label and seals
● Use only cleaning methods corresponding to the housing protection rating

9.2 Rectify faults

Reaction when malfunction occurs

The operator of the system is responsible for taking suitable measures to rectify faults.

Causes of malfunction

The device offers maximum reliability. Nevertheless, faults can occur during operation. These may be caused by the following, e.g.:

● Sensor
● Process
● Voltage supply
● Signal processing

Fault rectification

The first measures to be taken are to check the output signals as well as to evaluate the error messages via the display and adjustment module. The procedure is described below. Further comprehensive diagnostics can be carried out on a PC with the software PACTware and the suitable DTM. In many cases, the causes can be determined and the faults rectified this way.

Reaction after fault rectification

Depending on the reason for the fault and the measures taken, the steps described in chapter " *Setup*" must be carried out again or must be checked for plausibility and completeness.

24 hour service hotline

Should these measures not be successful, please call in urgent cases the VEGA service hotline under the phone no. **+49 1805 858550**.

The hotline is also available outside normal working hours, seven days a week around the clock.

Since we offer this service worldwide, the support is provided in English. The service itself is free of charge, the only costs involved are the normal call charges.

Checking Foundation Fieldbus

The following table describes possible errors and helps to remove them:

VEGACAL 69 • Foundation Fieldbus

Error	Cause	Rectification
When an additional instrument is connected, the H1 segment fails.	Max. supply current of the segment coupler exceeded	Measure the current consumption, reduce size of segment
Measured value on the display and adjustment module does not correspond to the value in the PLC	The menu item " *Display - Display value*" is not set to " *AI-Out*"	Check values and correct, if necessary
Instrument does not appear during connection setup	Profibus DP cable pole-reversed	Check cable and correct, if necessary
	Incorrect termination	Check termination at the beginning and end points of the bus and terminate, if necessary, according to the specification
	Instrument not connected to the segment	Check and correct, if necessary

In Ex applications, the regulations for the wiring of intrinsically safe circuits must be observed.

Error messages via the display and adjustment module

Error	Cause	Rectification
E013	no measured value available	● Short-circuit due to bridging by conductive buildup between process fitting and electrode ● Remove buildup, if necessary, mount a protective tube
	Shortcircuit in the probe, e.g. because of moisture in the housing	● Remove the electronics module out of the probe and check the resistor between the two marked plug connections according to the figure in paragraph " *Check the resistance in the probe*". ● There should be no contact between any of the connections (high resistance) ● If there is still a connection, exchange the instrument or return it for repair
E017	Adjustment span too small	Carry out a fresh adjustment and increase the distance between min. and max. adjustment
E036	no operable sensor software	Carry out a software update or send instrument for repair
E113	Communication conflict	Exchange the instrument or send it in for repair

9.3 Exchanging the electronics module

If the electronics module is defective, it can be replaced by the user.

In Ex applications, only instruments and electronics modules with appropriate Ex approval may be used.

If there is no electronics module available on site, the electronics module can be ordered through the agency serving you. The electronics modules are adapted to the respective sensor and differ in signal output or voltage supply.

The new electronics module must be loaded with the default settings of the sensor. These are the options:

● In the factory
● Or on site by the user

In both cases, the serial number of the sensor is needed. The serial numbers are stated on the type label of the instrument, on the inside of the housing as well as on the delivery note.

When loading on site, the order data must first be downloaded from the Internet (see operating instructions " *Electronics module*").

ℹ Information:
All application-specific settings must be entered again. That's why you have to carry out a fresh setup after exchanging the electronics.

If you saved the parameter settings during the first setup of the sensor, you can transfer them to the replacement electronics module. A fresh setup is then not necessary.

9.4   How to proceed if a repair is necessary

You can find an instrument return form as well as detailed information about the procedure in the download area of our homepage. By doing this you help us carry out the repair quickly and without having to call back for needed information.

Proceed as follows in case of repair:

● Print and fill out one form per instrument
● Clean the instrument and pack it damage-proof
● Attach the completed form and, if need be, also a safety data sheet outside on the packaging
● Ask the agency serving you to get the address for the return shipment. You can find the agency on our homepage.

10 Dismount

10.1 Dismounting steps

⚠ **Warning:**
Before dismounting, be aware of dangerous process conditions such as e.g. pressure in the vessel or pipeline, high temperatures, corrosive or toxic media etc.

Take note of chapters " *Mounting*" and " *Connecting to voltage supply*" and carry out the listed steps in reverse order.

10.2 Disposal

Pass the instrument on to a specialised recycling company and do not use the municipal collecting points.

Remove any batteries in advance, if they can be removed from the device, and dispose of them separately.

If personal data is stored on the old device to be disposed of, delete it before disposal.

If you have no way to dispose of the old instrument properly, please contact us concerning return and disposal.

11 Supplement

11.1 Technical data

Note for approved instruments

The technical data in the respective safety instructions which are included in delivery are valid for approved instruments (e.g. with Ex approval). These data can differ from the data listed herein, for example regarding the process conditions or the voltage supply.

All approval documents can be downloaded from our homepage.

General data

Material 316L corresponds to 1.4404 or 1.4435	
Materials, wetted parts	
– Process fitting - flange	PP or PTFE
– Insulation (fully insulated)	FEP
Materials, non-wetted parts	
– Probe - double rod fully insulated: ø 14 mm (0.551 in)	316L
– Plastic housing	Plastic PBT (Polyester)
– Aluminium die-cast housing	Aluminium die-casting AlSi10Mg, powder-coated (Basis: Polyester)
– Stainless steel housing (precision casting)	316L
– Stainless steel housing (electropolished)	316L
– Seal between housing and housing lid	Silicone
– Inspection window in housing cover (optional)	Plastic housing: Polycarbonate (UL746-C listed) Metal housing: Glass [2]
– Ground terminal	316L
– Cable gland	PA, stainless steel, brass
– Sealing, cable gland	NBR
– Blind plug, cable gland	PA
Process fittings	
– Flanges	DIN from DN 50, ASME from 2"
Weight [3]	
– Instrument weight	0.8 … 4 kg (0.18 … 8.82 lbs)
– Rod weight: ø 14 mm (0.551 in)	2000 g/m (22 oz/ft)
Sensor length (L)	0.2 … 4 m (0.656 … 13.12 ft)
Max. lateral load	10 Nm (7.4 lbf ft)
Torque for NPT cable glands and Conduit tubes	
– Plastic housing	max. 10 Nm (7.376 lbf ft)
– Aluminium/Stainless steel housing	max. 50 Nm (36.88 lbf ft)

– with connected overvoltage protection   up to 5000 m (16404 ft)

Pollution degree [4)]   4

Protection class   II (IEC 61010-1)

Approvals

Instruments with approvals can have different technical specifications depending on the version.

For that reason the associated approval documents of these instruments have to be carefully noted. They are part of the delivery or can be downloaded by entering the serial number of your instrument into the search field under www.vega.com as well as in the general download area.

11.2   Device communication Foundation Fieldbus

In the following, the necessary device-specific details are shown. You can find further information of Foundation Fieldbus on www.fieldbus.com.

[4)]   When used with fulfilled housing protection

Block diagram, measured value processing

The following illustration shows the Transducer Block (TB) and Function block (FB) in simplified form.

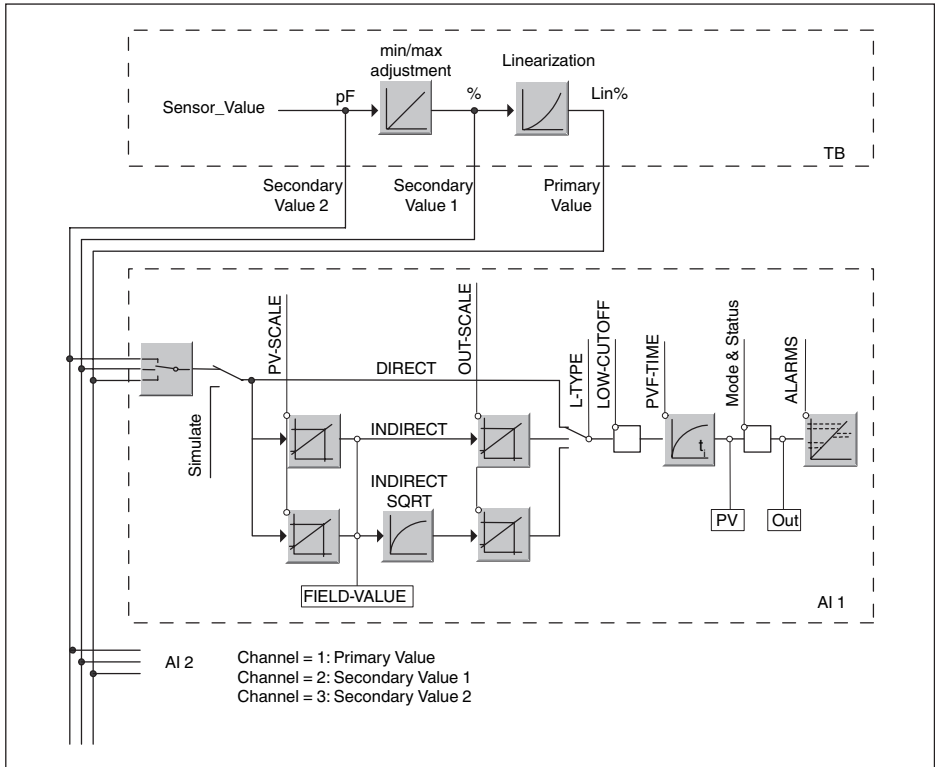

Fig. 29: VEGACAL 69 measured value processing

Diagram, adjustment

The following illustration shows the function of the adjustment:

Fig. 30: Adjustment VEGACAL 69

Parameter list

The following list contains the most important parameters and their meaning:

- primary_value
  - This is the process value after adjustment and Linearization with the status of the transducer block
  - It is the input for the AIFB when CHANNEL = 1 is selected
  - The unit is defined in "primary_value_unit"
- primary_value_unit
  - Selected unit code for "primary_value"
- secondary_value_1
  - This is the process value after adjustment with the status of the transducer block
  - It is the input for the AIFB when CHANNEL = 2 is selected
  - The unit is defined in "secondary_value_2_unit"
- secondary_value_1_unit
  - Selected unit code for "secondary_value_1"
- secondary_value_2
  - This is the distance value (sensor_value) with the status of the transducer block
  - It is the input for the AIFB when CHANNEL = 3 is selected
  - The unit is defined in "secondary_value_2"
- secondary_value_2_unit
  - Selected unit code for "secondary_value_2"
- sensor_value
  - This is the distance value of the sensor
  - The unit is defined in "sensor_range.Units Index"

- sensor_range
  - "sensor_range.Units Index" is the unit for "sensor_value", "max/min_peak_sensor_value", "Calibration Highest/Lowest Point" and "empty_vessel_ocrr_dist"
- simulate_primary_value
- simulate_secondary_value_1
- simulate_secondary_value_2
- Linearization Type
  - Linearization Type, the selectable types are: Linear, User def; Cylindric lying container, Spherical container
- tab_op_code
- tab_index
- tab_max_number
- tag_min_number
- tab_actual_number
- tab_status
- tab_x_y_value
- display_source_selector
  - Selects the type of value, which is displayed on the indicating and adjustment module
- max_peak_sensor_value
  - Holds the maximum "sensor_value". The unit is defined in "sensor_range.Units Index"
- min_peak_sensor_value
  - Holds the minimum "sensor_value". The unit is defined in "sensor_range.Units Index"
- Calibration Highest Point
  - Min./Max. adjustment: this is the upper calibrated point of the sensor_value. It refers to "cal_level_hi".
  - The unit is defined in "sensor_range.Units Index"
- Calibration Lowest Point
  - Min./Max. adjustment: this is the lower calibrated point of the sensor_value. It refers to "cal_level_lo".
  - The unit is defined in "sensor_range.Units Index"
- cal_level_hi
  - Min./Max. adjustment: this is the value of level at "Calibration Highest Point". The unit is defined in "level_unit.
  - When writing "cal_level_hi" and "cal_type" = 1, the "Calibration Highest Point" is automatically set to "sensor_value"
- cal_level_lo
  - Min./Max. adjustment: this is the value of level at "Calibration Lowest Point". The unit is defined in "level_unit"
  - When writing "cal_level_lo" and "cal_type" = 1, the "Calibration Lowest Point" is automatically set to "sensor_value"
- cal_type
  - Min./Max. adjustment: this parameter defines the type of calibration:
  - Dry: no influence of "sensor_value" on level calibration
  - Online: current "sensor_value"determines "Calibration Highest/Lowest Point"
- level
- level_unit
- level_offset
- sensor_offset
- phase_angle_select
  - set up to suit the process conditions
- epsilon_r
  - set up to suit the process conditions
- product_type

31180-EN-230510

– set up to suit the process conditions
● electrode_type
– set up to suit the process conditions

11.3 Dimensions

The following dimensional drawings represent only an extract of all possible versions. Detailed dimensional drawings can be downloaded at www.vega.com/downloads under " *Drawings*".
Plastic housing

Fig. 31: Housing versions in protection IP66/IP67 (with integrated display and adjustment module the housing is 9 mm/0.35 in higher)

1   Plastic single chamber
2   Plastic double chamber

Aluminium housing with protection rating IP66/IP68 (1 bar)

Fig. 32: Housing version with protection rating IP66/IP68 (1 bar), (with integrated display and adjustment module the housing is 18 mm/0.71 in higher)

1   Aluminium - single chamber
Fig. 33: VEGACAL 69

L   Sensor length, see chapter " Technical data"

11.4 Industrial property rights

VEGA product lines are global protected by industrial property rights. Further information see www.vega.com.

VEGA Produktfamilien sind weltweit geschützt durch gewerbliche Schutzrechte.

Nähere Informationen unter www.vega.com.

Les lignes de produits VEGA sont globalement protégées par des droits de propriété intellectuelle. Pour plus d'informations, on pourra se référer au site www.vega.com.

VEGA lineas de productos están protegidas por los derechos en el campo de la propiedad industrial. Para mayor información revise la pagina web www.vega.com.
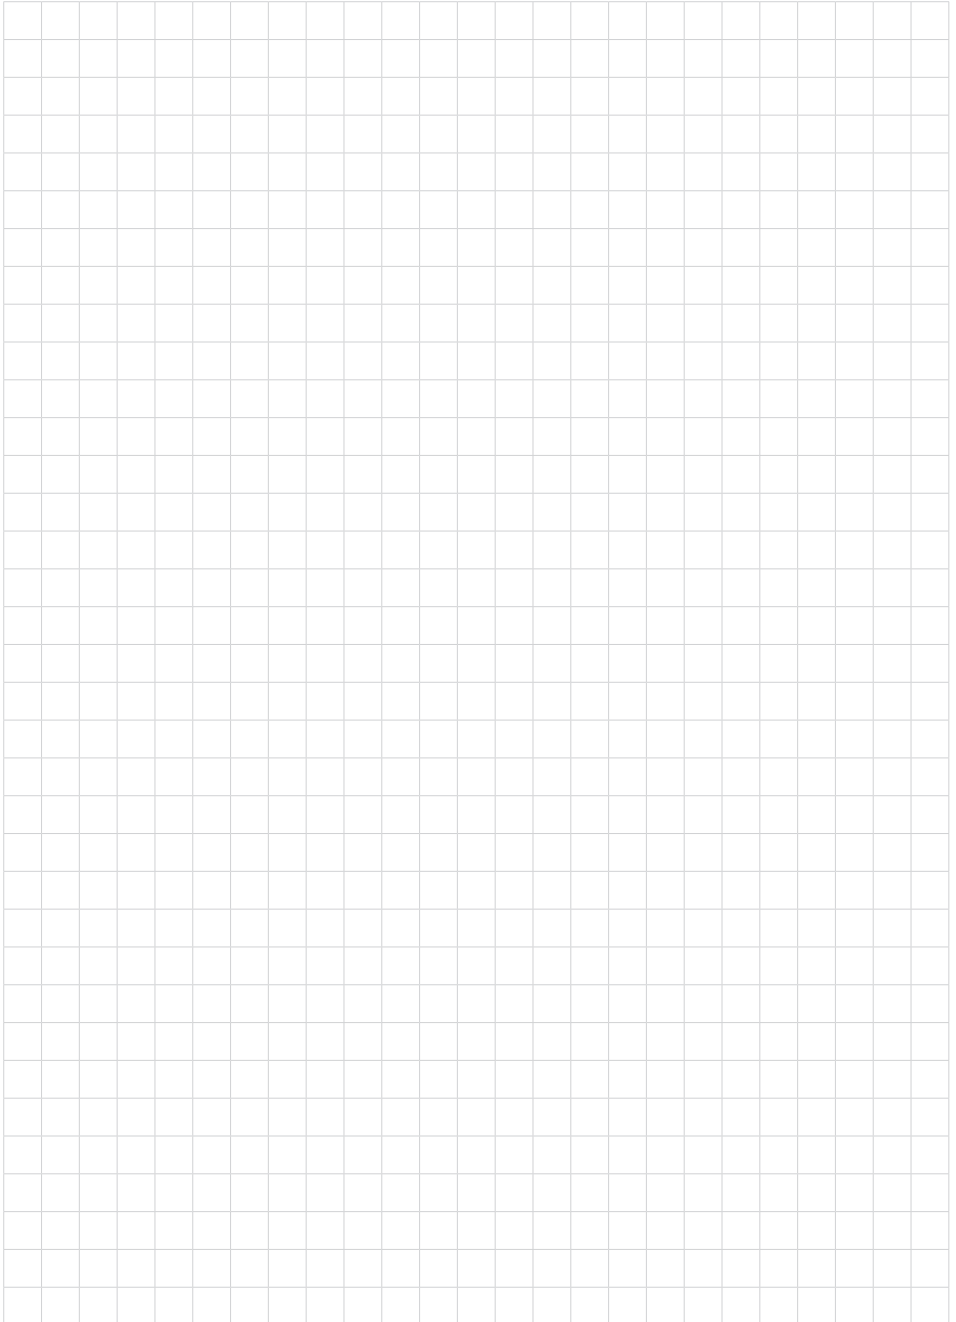

Линии продукции фирмы ВЕГА защищаются по всему миру правами на интеллектуальную собственность. Дальнейшую информацию смотрите на сайте www.vega.com.
VEGA系列产品在全球享有知识产权保护。
