Conditions of Acceptability: (For all Models)

1. At the plastic parts of the pressure transmitter type VEGABAR *8*(*) there is a danger of ignition by electrostatic discharge. Observe manual of the manufacturer and warning label.

2. For EPL Ga resp. EPL Ga/Gb applications, at the metallic parts of the pressure transmitter type VEGABAR *8*(*) made of light metal there is a danger of ignition by impact or friction. Observe

manual of the manufacturer.

3. For EPL Ga resp. EPL Ga/Gb applications and at risks by pendulum or vibration the respective parts of the pressure transmitter type VEGABAR *8*(*) have to be secured effectively against these dangers. Observe manual of the manufacturer.

4. For EPL Ga/Gb applications, the medium tangent materials of the pressure transmitter type VEGABAR *8*(*) have to be resistant to the media. Observe manual of the manufacturer.

5. For the execution with separate housing of the pressure transmitter type VEGABAR *8*(*) potential equalization has to exist in the complete course of the erection of the connecting cable between the electronics housing and the measuring sensor housing.

6. The flameproof housing of this equipment must be provided with cable entries and filler plugs resp. conduits which are certified according to IEC 60079-0 and IEC 60079-1. The connection cables, the cable entries and filler plugs resp. the conduits have to be suitable for the lowest ambient temperature.

7. VEGABAR *8* with electronics U: The intrinsically safe circuits of the barrier type P3-MODBUS are galvanically connected with the earth potential. Potential equalization has to exist in the complete course of the erection of the intrinsically safe circuits.

8. For applications requiring instruments of Class I, Zone 0, Zone 0/1 the process pressure of the media must be between 0.8 … 1.1 bar.
If the VEGABAR *8*(*).*E/Z/Q/J, VEGABAR *8*.*C/U/O/H/T and VEGABAR *8*(*).*D/V/P/I are operated at temperatures higher than those specified in the above table, please make sure through appropriate measures that there is no danger of ignition from the hot surfaces. The max. permissible temperature on the electronics/housing should not exceed the values specified in the above table.
The application conditions during operation with no explosive mixtures present are stated in the manufacturer information.

9. Wiring shall be in accordance with wiring method prescribed in Canadian Electrical Code (CEC) for installations in Canada and as per National Electrical Code (NFPA 70) for installation within U.S.
