VEGA

VEGAPULS 60 HART

For software versions • 4.0.0

HW version, available since	Description
2.0.0 **10/2009**	**New functions and modifications compared to HW version 1.1.0:** − extended supply voltage − increased measuring rate − improved accuracy − improved dynamics − real time clock with power reserve − detachable terminals − power supply with dust-Ex also non-intrinsically safe possible − electronics cup with extraction mechanism
2.0.1 **11/2009**	**Error corrections:** − start-up procedure with extreme electronics temperatures > 75°C corrected − self-discharge of the backup battery for the real time clock reduced − improvements when mounted in subsurface enclosures
2.0.2 **08/2011**	**Only used in VEGAPULS 67 HART**
2.1.0 **05/2010**	**Error corrections:** − start-up procedure improved (e.g. with ripple on power supply) − preparation for new additional electronics − EMC immunity adapted to NAMUR requirements − influence of the noise level by strong echoes removed
