VEGA

VEGAFLEX 80 two-wire 4 … 20 mA HART

HW version, available since	Description
1.1.3 06/2023	**Modifications compared to HW version 1.1.2:** – Update of the HF signal generation due to discontinued components
1.1.2 05/2019	**Modifications compared to HW version 1.1.1:** – Cause for the failure of individual instruments with error message F040/8000 "Failure in the electronics" due to too low signal amplitude o Adaptation of the filter damping to increase the signal amplitude
1.1.1 09/2015	**Modifications compared to HW version 1.1.0:** – Cause for the failure of individual instruments with error message F040/8000 "Failure in the electronics" with temperatures < -2 °C removed o Improved timing when synchronizing the HF signals
1.1.0 05/2014	**Modifications compared to HW version 1.0.0:** – Improved EMC behaviour (burst coupling) with o Transmission of the digital data of the current output o Reset of processor
