32258-EN-221012

32258-EN-221012

Safety instructions for Ex areas:

Take note of the Ex specific safety instructions for Ex applications. These instructions are attached as documents to each instrument with Ex approval and are part of the operating instructions.

Editing status: 2022-09-15

1 About this document

1.1 Function

This instruction provides all the information you need for mounting, connection and setup as well as important instructions for maintenance, fault rectification, the exchange of parts and the safety of the user. Please read this information before putting the instrument into operation and keep this manual accessible in the immediate vicinity of the device.

1.2 Target group

This operating instructions manual is directed to trained personnel. The contents of this manual must be made available to the qualified personnel and implemented.

1.3 Symbols used

Document ID

This symbol on the front page of this instruction refers to the Document ID. By entering the Document ID on <u>www.vega.com</u> you will reach the document download.

i

Information, note, tip: This symbol indicates helpful additional information and tips for successful work.

Warning: Non-observance of the information marked with this symbol may result in serious or fatal personal injury.

may result in serious or fatal personal injury. Danger: Non-observance of the information marked with this symbol

Ex applications

This symbol indicates special instructions for Ex applications.

List

The dot set in front indicates a list with no implied sequence.

1 Sequence of actions

Numbers set in front indicate successive steps in a procedure.

Disposal

This symbol indicates special instructions for disposal.

2 For your safety

2.1 Authorised personnel

All operations described in this documentation must be carried out only by trained, qualified personnel authorised by the plant operator.

During work on and with the device, the required personal protective equipment must always be worn.

2.2 Appropriate use

The VEGAWAVE 63 is a sensor for point level detection.

You can find detailed information about the area of application in chapter "*Product description*".

Operational reliability is ensured only if the instrument is properly used according to the specifications in the operating instructions manual as well as possible supplementary instructions.

For safety and warranty reasons, any invasive work on the device beyond that described in the operating instructions manual may be carried out only by personnel authorised by the manufacturer. Arbitrary conversions or modifications are explicitly forbidden.

2.3 Warning about incorrect use

Inappropriate or incorrect use of this product can give rise to application-specific hazards, e.g. vessel overfill through incorrect mounting or adjustment. Damage to property and persons or environmental contamination can result. Also, the protective characteristics of the instrument can be impaired.

2.4 General safety instructions

This is a state-of-the-art instrument complying with all prevailing regulations and directives. The instrument must only be operated in a technically flawless and reliable condition. The operator is responsible for the trouble-free operation of the instrument. When measuring aggressive or corrosive media that can cause a dangerous situation if the instrument malfunctions, the operator has to implement suitable measures to make sure the instrument is functioning properly.

The safety instructions in this operating instructions manual, the national installation standards as well as the valid safety regulations and accident prevention rules must be observed by the user.

For safety and warranty reasons, any invasive work on the device beyond that described in the operating instructions manual may be carried out only by personnel authorised by the manufacturer. Arbitrary conversions or modifications are explicitly forbidden. For safety reasons, only the accessory specified by the manufacturer must be used.

To avoid any danger, the safety approval markings and safety tips on the device must also be observed.

2.5 Safety label on the instrument

The safety approval markings and safety tips on the device must be observed.

2.6 Conformity

The device complies with the legal requirements of the applicable country-specific directives or technical regulations. We confirm conformity with the corresponding labelling.

The corresponding conformity declarations can be found on our homepage.

2.7 SIL conformity

VEGAWAVE 63 meets the requirements to the functional safety according to IEC 61508. Further information is available in the Safety Manual " VEGAWAVE series 60".

2.8 Installation and operation in the USA and Canada

This information is only valid for USA and Canada. Hence the following text is only available in the English language.

Installations in the US shall comply with the relevant requirements of the National Electrical Code (ANSI/NFPA 70).

Installations in Canada shall comply with the relevant requirements of the Canadian Electrical Code.

2.9 Safety instructions for Ex areas

For applications in explosion-proof areas (Ex), only devices with corresponding Ex approval may be used. Observe the Ex-specific safety instructions. These are an integral part of the operating instructions and are enclosed with every device with Ex approval.

2.10 Environmental instructions

Protection of the environment is one of our most important duties. That is why we have introduced an environment management system with the goal of continuously improving company environmental protection. The environment management system is certified according to DIN EN ISO 14001.

Please help us fulfil this obligation by observing the environmental instructions in this manual:

- Chapter " Packaging, transport and storage"
- Chapter " Disposal"

Scope of delivery

3 Product description

3.1 Configuration

The scope of delivery encompasses:

- VEGAWAVE 63 point level switch
- Documentation
 - This operating instructions manual
 - Safety Manual " Functional safety (SIL)" (optional)
 - Supplementary instructions manual " *Plug connector for level sensors*" (optional)
 - Ex-specific " Safety instructions" (with Ex versions)
 - If necessary, further certificates

Constituent parts

- The VEGAWAVE 63 consists of the components:
- Housing lid
- Housing with electronics
- Process fitting with tuning fork

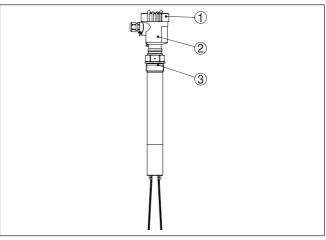

Fig. 1: VEGAWAVE 63 with plastic housing

- 1 Housing lid
- 2 Housing with electronics
- 3 Process fitting

Type label

The type label contains the most important data for identification and use of the instrument:

- Article number
- Serial number
- Technical data
- Article numbers, documentation
- SIL identification (with SIL rating ex works)

With the serial number, you can access the delivery data of the instrument via "www.vega.com", " Search". You can find the serial number

on the inside of the instrument as well as on the type label on the outside.

3.2	Princi	ple of	operation
-----	--------	--------	-----------

	3.2 Principle of operation		
Application area	VEGAWAVE 63 is a point level sensor with tuning fork for point level detection.		
	It is designed for industrial use in all areas of process technology and is preferably used for bulk solids.		
	Typical applications are overfill and dry run protection. Thanks to its simple and robust measuring system, VEGAWAVE 63 is virtually unaffected by the chemical and physical properties of the bulk solid.		
	It also works when subjected to strong external vibrations or changing products.		
	Solid detection in water If VEGAWAVE 63 was ordered for solids detection in water, the tuning fork is set to the density of water. In air or when immersed in water (density: 1 g/cm ³ /0.036 lbs/in), VEGAWAVE 63 signals "uncovered". Only when the vibrating element is also covered with solids (e.g. sand, sludge, gravel etc.) will the sensor signal "covered".		
	Function monitoring The electronics module of VEGAWAVE 63 continuously monitors the following criteria:		
	Correct vibrating frequencyLine break to the piezo drive		
	If a malfunction is detected or in case of voltage supply, the electron- ics takes on a defined switching status, i.e. the output is open (safe state).		
Functional principle	The tuning fork is piezoelectrically energised and vibrates at its mechanical resonance frequency of approx. 150 Hz. When the tuning fork is submerged in the product, the vibration amplitude changes. This change is detected by the integrated electronics module and converted into a switching command.		
Voltage supply	VEGAWAVE 63 is a compact instrument, i.e. it can be operated with- out external evaluation system. The integrated electronics evaluates the level signal and outputs a switching signal. With this switching signal, a connected device can be operated directly (e.g. a warning system, a pump etc.).		
	The data for power supply are specified in chapter " Technical data".		
	3.3 Adjustment		
	On the electronics module you will find the following display and		

On the electronics module you will find the following display and adjustment elements:

- Signal lamp for indication of the switching condition (green/red)
- Potentiometer for adaptation to the product density
- Mode switch for selecting the switching condition (min./max.)

	3.4 Storage and transport		
Packaging	Your instrument was protected by packaging during transport. Its capacity to handle normal loads during transport is assured by a test based on ISO 4180.		
	The packaging of standard instruments consists of environment- friendly, recyclable carton material. The sensing element is additional- ly protected with a cardboard cover. For special versions, PE foam or PE foil is also used. Please dispose of the packaging material through specialised recycling companies.		
Transport	Transport must be carried out in due consideration of the notes on the transport packaging. Nonobservance of these instructions can cause damage to the device.		
Transport inspection	The delivery must be checked for completeness and possible transit damage immediately at receipt. Ascertained transit damage or con- cealed defects must be appropriately dealt with.		
Storage	Up to the time of installation, the packages must be left closed and stored according to the orientation and storage markings on the outside.		
	Unless otherwise indicated, the packages must be stored only under the following conditions:		
	 Not in the open Dry and dust free Not exposed to corrosive media Protected against solar radiation Avoiding mechanical shock and vibration 		
Storage and transport temperature	 Storage and transport temperature see chapter " <i>Supplement - Technical data - Ambient conditions</i>" Relative moisture 20 85 % 		
Lifting and carrying	With instrument weights of more than 18 kg (39.68 lbs) suitable and		

1.1.1

Lifting and carrying

With instrument weights of more than 18 kg (39.68 lbs) suitable and approved equipment must be used for lifting and carrying.

4	Mounting	
---	----------	--

4.1 General instructions

Process conditions

Note:

For safety reasons, the instrument must only be operated within the permissible process conditions. You can find detailed information on the process conditions in chapter "*Technical data*" of the operating instructions or on the type label.

Hence make sure before mounting that all parts of the instrument exposed to the process are suitable for the existing process conditions.

These are mainly:

- Active measuring component
- Process fitting
- Process seal

Process conditions in particular are:

- Process pressure
- Process temperature
- Chemical properties of the medium
- Abrasion and mechanical influences

Suitability for the ambient conditions	The instrument is suitable for standard and extended ambient condi- tions acc. to DIN/EN/IEC/ANSI/ISA/UL/CSA 61010-1. It can be used indoors as well as outdoors.
Switching point	In general, VEGAWAVE 63 can be installed in any position. The instru- ment only has to be mounted in such a way that the vibrating element is at the height of the desired switching point.
Moisture	Use the recommended cables (see chapter " <i>Connecting to power supply</i> ") and tighten the cable gland.
	You can give your instrument additional protection against moisture penetration by leading the connection cable downward in front of the cable gland. Rain and condensation water can thus drain off. This applies mainly to outdoor mounting as well as installation in areas where high humidity is expected (e.g. through cleaning processes) or on cooled or heated vessels.
	To maintain the housing protection, make sure that the housing lid is closed during operation and locked, if necessary.

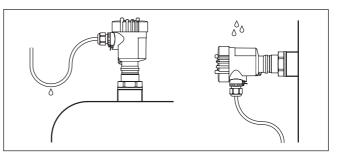

Fig. 2: Measures against moisture ingress

Transport	Do not hold VEGAWAVE 63 on the vibrating element. Especially with flange and tube versions, the sensor can be damaged by the weight of the instrument. Remove the protective cover just before mounting.		
Pressure/Vacuum	The process fitting must be sealed if there is gauge or low pressure in the vessel. Before use, check if the sealing material is resistant against the measured product and the process temperature. The max. permissible pressure is specified in chapter " <i>Technical</i> <i>data</i> " or on the type label of the sensor.		
Handling	The vibrating level switch is a measuring instrument and must be treated accordingly. Bending the vibrating element will destroy the instrument.		
\wedge	Warning: The housing must not be used to screw the instrument in! Applying tightening force can damage internal parts of the housing. Use the hexagon above the thread for screwing in.		
Cable entries - NPT thread Cable glands	Metric threads In the case of instrument housings with metric thread, the cable glands are screwed in at the factory. They are sealed with plastic plugs as transport protection. You have to remove these plugs before electrical connection.		
	NPT thread In the case of instrument housings with self-sealing NPT threads, it is not possible to have the cable entries screwed in at the factory. The free openings for the cable glands are therefore covered with red dust protection caps as transport protection. Prior to setup you have to replace these protective caps with ap-		
Asitotoxo and fluidization	 proved cable glands or close the openings with suitable blind plugs. 4.2 Mounting instructions 		
Agitators and fluidization	Due to the effects of agitators, equipment vibration or similar, the level switch can be subjected to strong lateral forces. For this reason, do		

not use an overly long extension tube for VEGAWAVE 63, but check if you can mount a short level switch on the side of the vessel in horizontal position.

Extreme vibration caused by the process or the equipment, e.g. agitators or turbulence in the vessel, e.g. by fluidisation, can cause the extension tube of VEGAWAVE 63 to vibrate in resonance. This leads to increased stress on the upper weld joint. Should a longer tube version be necessary, you can provide a suitable support directly above the vibrating element to secure the extension tube.

This measure applies mainly to applications in Ex areas. Make sure that the tube is not subject to bending stress due to this measure.

Inflowing medium

If VEGAWAVE 63 is mounted in the filling stream, unwanted false measurement signals can be generated. For this reason, mount VEGAWAVE 63 at a position in the vessel where no disturbances, e.g. from filling openings, agitators, etc., can occur.

This applies particularly to instrument types with long extension tube.

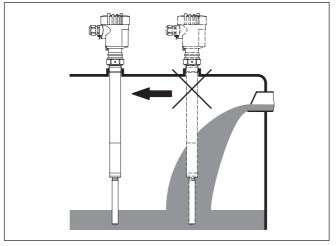

Fig. 3: Inflowing medium

Lock fitting	VEGAWAVE 63 can be mounted with a lock fitting for height adjust- ment. Take note of the pressure information of the lock fitting.
Nozzle	The vibrating element should protrude into the vessel to avoid buildup. For that reason, avoid using mounting bosses for flanges and screwed fittings. This applies particularly to use with adhesive products.
Material cone	In silos for bulk solids, material cones can form and change the switching point. Please keep this in mind when installing the sensor in the vessel. We recommend selecting an installation location where the vibrating fork detects an average value of the material cone.

The tuning fork must be mounted in a way that takes the arrangement of the filling and emptying apertures into account.

To compensate measurement errors caused by the material cone in cylindrical vessels, the sensor must be mounted at a distance of d/6 from the vessel wall.

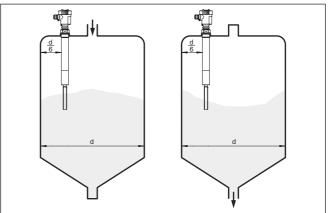

Fig. 4: Filling and emptying centred

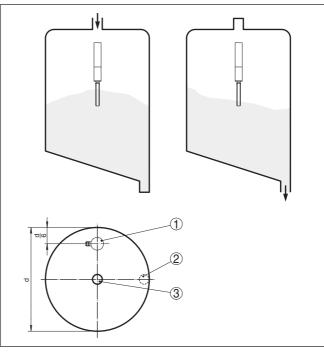

Fig. 5: Filling in the centre, emptying laterally

- 1 VEGAWAVE 63
- 2 Discharge opening
- 3 Filling opening

Product flow

To make sure the tuning fork of VEGAWAVE 63 generates as little resistance as possible to product flow, mount the sensor so that the surfaces are parallel to the product movement.

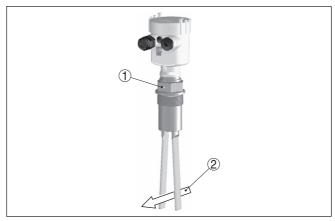

Fig. 6: Flow orientation of the tuning fork

- 1 Marking with screwed version
- 2 Direction of flow

Baffle protection against falling rocks

In applications such as grit chambers or settling basins for coarse sediments, the vibrating element must be protected against damage with a suitable baffle.

This baffle must be manufactured by you.

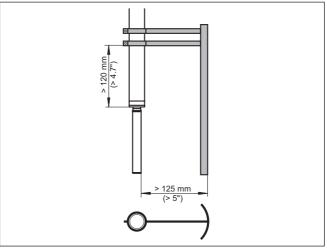

Fig. 7: Baffle for protection against mechanical damage

		5 Connecting to power supply
Note safety instruction	ons	5.1 Preparing the connection Always keep in mind the following safety instructions:
	\land	Warning: Connect only in the complete absence of line voltage.
		 The electrical connection must only be carried out by trained, qualified personnel authorised by the plant operator. Always switch off power supply, before connecting or disconnecting the instrument.
Take note of safety instructions for Ex applications	(Ex)	In hazardous areas you must take note of the respective regulations, conformity and type approval certificates of the sensors and power supply units.
Voltage supply		Connect the voltage supply according to the following diagrams. Take note of the general installation regulations. As a rule, connect VEGA- WAVE 63 to vessel ground (PA), or in case of plastic vessels, to the next ground potential. On the side of the instrument housing there is a ground terminal between the cable entries. This connection serves to drain off electrostatic charges. In Ex applications, the installation regulations for hazardous areas must be given priority. The data for power supply are specified in chapter " <i>Technical data</i> ".
Connection cable		The instrument is connected with standard three-wire cable without shielding. If electromagnetic interference is expected which is above the test values of EN 61326 for industrial areas, shielded cable should be used.
		Make sure that the cable used has the required temperature resist- ance and fire safety for max. occurring ambient temperature
		Use cable with round cross-section. A cable outer diameter of $5 \dots 9 \text{ mm} (0.2 \dots 0.35 \text{ in})$ ensures the seal effect of the cable gland. If you are using cable with a different diameter or cross-section, exchange the seal or use a suitable cable gland.
	(Ex)	In hazardous areas, use only approved cable connections for VEGA-WAVE 63.
Connection cable for Ex applications	(Ex)	Take note of the corresponding installation regulations for Ex applica- tions.
	_	Cover all housing openings conforming to standard according to EN 60079-1.
		5.2 Connection procedure
	(Ex)	With Ex instruments, the housing cover may only be opened if there is no explosive atmosphere present.

32258-EN-221012

Proceed as follows:

1. Unscrew the housing lid

- 2. Loosen compression nut of the cable gland and remove blind plug
- 3. Remove approx. 10 cm (4 in) of the cable mantle, strip approx. 1 cm (0.4 in) of insulation from the ends of the individual wires
- 4. Insert the cable into the sensor through the cable entry
- 5. Lift the opening levers of the terminals with a screwdriver (see following illustration)

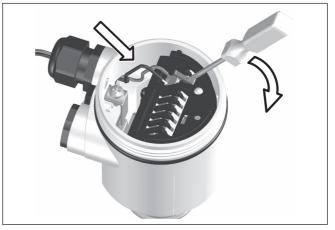

Fig. 8: Connection steps 5 and 6

- 6. Insert the wire ends into the open terminals according to the wiring plan
- 7. Press down the opening levers of the terminals, you will hear the terminal spring closing
- 8. Check the hold of the wires in the terminals by lightly pulling on them
- 9. Tighten the compression nut of the cable entry gland. The seal ring must completely encircle the cable
- 10. If necessary, carry out a fresh adjustment
- 11. Screw the housing lid back on

The electrical connection is finished.

5.3 Wiring plan, single chamber housing

The following illustrations apply to the non-Ex as well as to the Ex-d version.

Housing overview

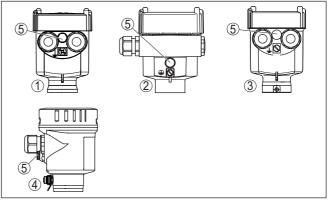

Fig. 9: Material versions, single chamber housing

- 1 Plastic (not with Ex d)
- 2 Aluminium
- 3 Stainless steel (not with Ex d)
- 4 Stainless steel, electropolished (not with Ex d)
- 5 Filter element for pressure compensation or blind plug with version IP 66/IP 68, 1 bar (not with Ex d)

Wiring plan

We recommend connecting VEGAWAVE 63 in such a way that the switching circuit is open when there is a level signal, line break or failure (safe state).

The instrument is used to control relays, contactors, magnet valves, warning lights, horns as well as PLC inputs.

Caution:

There is no reverse polarity protection. Take note of the polarity of the output lines.

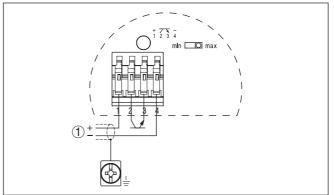

Fig. 10: Wiring plan

6 Setup

6 1 **General information**

The figures in brackets refer to the following illustrations.

Function/Configuration

On the electronics module you will find the following display and adjustment elements:

- Potentiometer for adjustment of the density range (1)
- DIL switch for mode adjustment min./max. (2)
- Signal lamp (5)

Note:

As a rule, always set the mode with mode switch (2) before starting the setup of VEGAWAVE 63. The switching output will change if you set the mode switch (2) afterwards. This could possibly trigger other connected instruments or devices.

6.2 Adjustment elements

Electronics and connection compartment

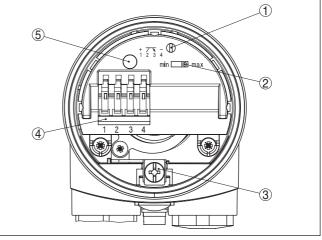

Fig. 14: Electronics and connection compartment - transistor output

- 1 Potentiometer for adjustment of the density range
- 2 DIL switch for mode adjustment
- 3 Ground terminal
- 4 Connection terminals
- 5 Control lamp

range (1)

Adjustment of the density With the potentiometer you can adapt the switching point to the solid. It is already preset and must only be modified in special cases.

> By default, the potentiometer of VEGAWAVE 63 is set to the right stop (> 0.02 g/cm³ or 0.0008 lbs/in³). In case of very light-weight solids, turn the potentiometer to the left stop (> 0.008 g/cm³ or 0.0003 lbs/

	in ³). VEGAWAVE 63 will thus be more sensitive and can detect light- weight solids more reliably.
	For instruments detecting solids in water, these settings are not applicable. The density range is preset and must not be changed.
Mode adjustment (2)	With the mode switch (min./max.) you can change the switching sta- tus of the transistor output. You can set the required mode according to the " <i>Function table</i> " (max max. detection or overflow protection, min min. detection or dry run protection).
	We recommend connecting according to the idle current principle (switching output is opened when the switching point is reached) be- cause the transistor output takes on the same (safe) state if a failure is detected.
Signal lamp (5)	Control lamp for indication of the switching status

- Green = Output closed
- Red = Output open
- red (flashing) = failure

6.3 Function table

The following table provides an overview of the switching conditions depending on the set mode and the level.

	Level	Switching status	Control lamp
Mode max. Overflow protection		closed	-;☆-
			Green
Mode max. Overflow protection		open	-×-
			Red
Mode min. Dry run protection		closed	-;×;-
			Green
Mode min. Dry run protection		open	-×-
			Red
Failure of the supply volt- age (min./max. mode)	any	open	0

	Level	Switching status	Control lamp
Fault	any	open	
			flashes red

7 Maintenance and fault rectification

	7.1 Maintenance
Maintenance	If the device is used properly, no special maintenance is required in normal operation.
Cleaning	The cleaning helps that the type label and markings on the instrument are visible.
	Take note of the following:
	• Use only cleaning agents which do not corrode the housings, type label and seals
	 Use only cleaning methods corresponding to the housing protec- tion rating
	7.2 Rectify faults
Reaction when malfunc- tion occurs	The operator of the system is responsible for taking suitable measures to rectify faults.
Causes of malfunction	The device offers maximum reliability. Nevertheless, faults can occur during operation. These may be caused by the following, e.g.:
	Sensor Process
	Voltage supply
	Signal processing
Fault rectification	The first measure to take is to check the output signal. In many cases, the causes can be determined this way and the faults quickly rectified.
24 hour service hotline	Should these measures not be successful, please call in urgent cases the VEGA service hotline under the phone no. +49 1805 858550.
	The hotline is manned 7 days a week round-the-clock. Since we offer

The hotline is manned 7 days a week round-the-clock. Since we offer this service worldwide, the support is only available in the English language. The service is free, only standard call charges are incurred.

Checking the switching signal

Error	Cause	Rectification							
VEGAWAVE 63 signals	Operating voltage too low	Check operating voltage							
"covered" without being submerged (overfill pro- tection) VEGAWAVE 63 signals "uncovered" when being submerged (day up pro-	Electronics defective	Press the mode switch. If the instrument then changes the mode, the vibrating element may be covered with buildup or mechanically damaged. Should the switch- ing function in the correct mode still be faulty, return the instrument for repair.							
submerged (dry run pro- tection)		Press the mode switch. If the instrument then does not change the mode, the electronics module may be defective. Exchange the electronics module.							
	Unfavourable installation location	Mount the instrument at a location in the vessel where no dead zones or mounds can form.							
	Buildup on the vibrating el- ement	Check the vibrating element and the sensor for buildup and remove the buildup if there is any.							
	Wrong mode selected	Set the correct mode with the mode switch (overflow protection, dry run protection). Wiring should be carried out according to the closed-circuit principle.							
Signal lamp flashes red	Error on the vibrating el- ement	Check if the vibrating element is damaged or extreme- ly corroded.							
	Interference on the elec- tronics module	Exchanging the electronics module							
	Instrument defective	Exchange the instrument or send it in for repair							

Reaction after fault rectification

Depending on the reason for the fault and the measures taken, the steps described in chapter " *Setup*" must be carried out again or must be checked for plausibility and completeness.

7.3 Exchanging the electronics module

In general, all electronics modules of series WE60 can be interchanged. If you want to use an electronics module with a different signal output, you can download the corresponding operating instructions manual from our homepage under Downloads.

With Ex-d instruments, the housing cover may only be opened if there is no explosive atmosphere present.

Proceed as follows:

- 1. Switch off voltage supply
- 2. Unscrew the housing lid
- 3. Lift the opening levers of the terminals with a screwdriver
- 4. Pull the connection cables out of the terminals
- Loosen the two screws with a screw driver (Torx size T10 or slot 4)

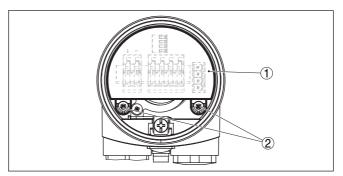

Fig. 15: Loosen the holding screws

- 1 Electronics module
- 2 Screws (2 pcs.)
- 6. Pull out the old electronics module
- 7. Compare the new electronics module with the old one. The type label of the electronics module must correspond to that of the old electronics module. This applies particularly to instruments used in hazardous areas.
- Compare the settings of the two electronics modules. Set the adjustment elements of the new electronics module to the same setting of the old one.

Information:

Make sure that the housing is not rotated during the electronics exchange. Otherwise the plug may be in a different position later.

- 9. Insert the electronics module carefully. Make sure that the plug is in the correct position.
- 10. Screw in and tighten the two holding screws with a screwdriver (Torx size T10 or Phillips 4)
- 11. Insert the wire ends into the open terminals according to the wiring plan
- 12. Press down the opening levers of the terminals, you will hear the terminal spring closing
- 13. Check the hold of the wires in the terminals by lightly pulling on them
- 14. Check cable gland on tightness. The seal ring must completely encircle the cable.
- 15. Screw the housing lid back on

The electronics exchange is now finished.

7.4 How to proceed if a repair is necessary

You can find an instrument return form as well as detailed information about the procedure in the download area of our homepage. By doing this you help us carry out the repair quickly and without having to call back for needed information.

In case of repair, proceed as follows:

- Print and fill out one form per instrument
- Clean the instrument and pack it damage-proof
- Attach the completed form and, if need be, also a safety data sheet outside on the packaging
- Ask the agency serving you to get the address for the return shipment. You can find the agency on our homepage.

8 Dismount

8.1 Dismounting steps

Warning:

Before dismounting, be aware of dangerous process conditions such as e.g. pressure in the vessel, high temperatures, corrosive or toxic products etc.

Take note of chapters "*Mounting*" and "*Connecting to voltage supply*" and carry out the listed steps in reverse order.

With Ex instruments, the housing cover may only be opened if there is no explosive atmosphere present.

8.2 Disposal

Pass the instrument on to a specialised recycling company and do not use the municipal collecting points.

Remove any batteries in advance, if they can be removed from the device, and dispose of them separately.

If personal data is stored on the old device to be disposed of, delete it before disposal.

If you have no way to dispose of the old instrument properly, please contact us concerning return and disposal.

9.1 Technical data

Note for approved instruments

The technical data in the respective safety instructions which are included in delivery are valid for approved instruments (e.g. with Ex approval). These data can differ from the data listed herein, for example regarding the process conditions or the voltage supply.

All approval documents can be downloaded from our homepage.

General data	
Material 316L corresponds to 1.4404 or 1	1.4435
Materials, wetted parts	
 Process fitting - thread 	316L
 Process fitting - flange 	316L
 Process seal 	Klingersil C-4400
- Tuning fork	316L
- Extension tube ø 43 mm (1.7 in)	316L
Materials, non-wetted parts	
 Plastic housing 	Plastic PBT (Polyester)
 Aluminium die-cast housing 	Aluminium die-casting AlSi10Mg, powder-coated (Basis: Polyester)
 Stainless steel housing (precision casting) 	316L
 Stainless steel housing (electropol- ished) 	316L
- Seal between housing and housing lid	Silicone
 Light guide in housing cover (plastic) 	PMMA (Makrolon)
 Ground terminal 	316L
– Cable gland	PA, stainless steel, brass
 Sealing, cable gland 	NBR
 Blind plug, cable gland 	PA
Process fittings	
- Pipe thread, cylindrical (DIN 3852-A)	G1½
- Pipe thread, conical (ASME B1.20.1)	1½ NPT
Weight approx.	
 Instrument weight (depending on process fitting) 	0.8 4 kg (0.18 8.82 lbs)
 Extension tube 	2000 g/m (21.5 oz/ft)
Sensor length (L)	0.24 6 m (0.787 19.69 ft)
Sensor lengths - accuracy	± 2 mm (± 0.079 in)
Max. lateral load	290 Nm, max. 600 N (214 lbf ft, max. 135 lbf)

32258-EN-221012

Fig. 16: Max. lateral load alongside fork side (narrow fork side)

 Plastic housing 	max. 10 Nm (7.376 lbf ft)
 Aluminium/Stainless steel housing 	max. 50 Nm (36.88 lbf ft)

Output variable	
Output	Floating transistor output, permanently shortcircuit-proof
Load current	< 400 mA
Switching voltage	< 55 V DC
Blocking current	< 100 µA
Modes (switchable)	min./max.
Switching delay	
- When immersed	0.5 s
- When laid bare	1 s
Ambient conditions	
Ambient temperature on the housing	-40 +80 °C (-40 +176 °F)
Storage and transport temperature	-40 +80 °C (-40 +176 °F)
Process conditions	
Measured variable	Limit level of solids
Process pressure	-1 25 bar/-100 2500 kPa (-14.5 363 psig)
VEGAWAVE 63 of 316L	-50 +150 °C (-58 +302 °F)
Process temperature (thread or flange temperature) with temperature adapter (option)	-50 +250 °C (-58 +482 °F)

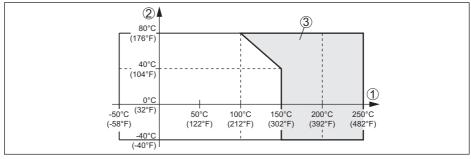

Fig. 17: Ambient temperature - Process temperature

Stainless steel (precision casting)	IP66/IP68 (0.2 bar)	Type 6P
	IP68 (1 bar)	Type 6P
Altitude above sea level	up to 5000 m (16404 ft)	
Overvoltage category		
– up to 2000 m (6562 ft)	III	
– up to 5000 m (16404 ft)	Ш	
Protection class	II	

Approvals

Instruments with approvals can have different technical specifications depending on the version.

For that reason the associated approval documents of these instruments have to be carefully noted. They are part of the delivery or can be downloaded by entering the serial number of your instrument into the search field under <u>www.vega.com</u> as well as in the general download area.

9.2 Dimensions

Housing in protection IP66/IP67 and IP66/IP68; 0.2 bar
