

# Reliable

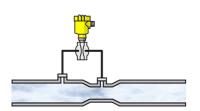

Reliable flow measurement of combustion air

#### **Cost effective**

Exact volume control possible for optimal combustion process

#### **User friendly**

Easy setup

# Combustion air pipe

# Combustion air flow and volume measurement

To ensure an optimum combustion process in a coal-fired power plant, the amount of air flowing in the pipes leading to the furnace must be carefully monitored. A Venturi section of the air pipe is a defined constriction in which the pressure drops a few millibars proportional to flow rate. Differential pressure transmitter measures the pressure drop across the measuring section very accurately and calculates the air flow rate.

#### More details

# **VEGADIF 85**

Differential pressure transmitter for flow measurement of combustion air

- High operational reliability through integrated overload diaphragm
- Universally applicable thanks to wide selection of measuring ranges and process fittings
- Measurement of extremely low differential pressures with high-precision instrument, even at high temperatures

**Show Product** 

# VEGADIF 85 Show Product

# Measuring range - Pressure

-40 ... 40 bar

#### Process temperature

-40 ... 105 °C

#### Process pressure

-1 ... 400 bar

#### 1 ... 100 bai

Accuracy 0.065 %

# Materials, wetted parts

316L

Tantalum

Alloy C276 (2.4819)

Monel

# Threaded connection

1/4 - 18 NPT

### Flange connection

≥ DN32, ≥ 1¾"

#### Seal material

EPDM

FKM

Copper

# Housing material

Plastic

Aluminium

Stainless steel (precision casting)

Stainless steel (electropolished)

# Protection rating

IP66/IP68 (0,2 bar)

IP66/IP67

IP66/IP68 (1 bar)
