

Reliable

Reliable measurement despite high temperatures

Cost effective Optimal stocks enable continuous production

User friendly Maintenance-free operation

Clinker silo

Level measurement and point level detection in clinker silos

After the raw meal is burned, the emerging clinker of varying consistency is stored for further processing. The silos are filled and emptied through different openings. Continuous operation of the subsequent production processes is ensured by level measurement and point level detection.

More details

VEGAPULS 6X

Level measurement with radar in clinker silos

- Exact measurement right to the bottom of the discharge funnel thanks to small beam angle
- High measurement certainty, unaffected by dust and temperature changes
- Maintenance-free through non-contact measurement

Show Product

VEGACAP 65

Capacitive point level detection in clinker silos

- Robust construction ensures a long service life
- Reliable measurement, unaffected by buildup
- Cut to length cable probes allow high flexibility
