

Reliable

Reliable measurement, even with vapours and agitators in motion

Cost effective

Uninterrupted waste processing

User friendly

Non-contact measurement for all hazardous

Intermediate hazardous waste storage tank

Level measurement and point level detection in an intermediate storage tank

Both chemical and thermal processes are used to treat hazardous waste. For efficient processing, the flow rate through the processing facility must be kept constant. To facilitate this, hazardous wastes such as varnishes, paints and thinners are buffered in tanks. Agitators prevent clumping and settling of the solids contained in the mixture. Reliable level measurement ensures continuous waste processing is maintained.

More details

VEGACAP 64

Capacitive limit level detection in the intermediate storage tank

- Overfill protection for the tank, dry run protection for pump and agitator
- Adjustment-free and unaffected by buildup
- Robust and maintenance-free thanks to proven measurement technology

Show Product

VEGAPULS 6X

Level measurement with radar in the intermediate storage tank

- Reliable measurement, even under difficult process conditions
- Precise measuring results, small blocking distance
- Unaffected by product surface turbulence caused by agitators
- Chemically resistant PTFE-encapsulated antenna System
