

Reliable

Reliable measurement in rough weather conditions such as wind, rain, snow

Cost effective Maintenance-free operation

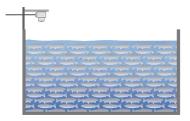

User friendly Easy installation thanks to ideal mounting accessories

Fish farming tank

Level measurement in fish farming tanks

Under ideal conditions, a wide variety of fish species can live in indoor and outdoor tanks, either in or near the sea. It is extremely important that the tanks are reliably monitored against leakage and always adequately supplied with fresh water. Reliable pump monitoring when emptying and filling the tanks is also important. All three factors increase the efficiency of fish production and make a significant contribution to the overall success of the facility.

More details

VEGAPULS C 22

Non-contact level measurement with radar in fish tanks

- · Non-contact measurement, thus no contact with the fish
- Reliable measurement even in rough weather conditions
- Stable growth conditions for fish thanks to reliable measurement

Show Product

BASIC	
VEGAPULS C 22 Show Product	
Measuring range - Distance 15 m	
Process temperature -40 80 °C	
Process press	sure
Accuracy ± 2 mm	
Frequency 80 GHz	
Beam angle 8°	
Materials, wet PVDF	ted parts
Threaded connection G1½, 1½ NPT, R1½	
Seal material FKM	
Housing material Housing material
