

## Reliable

Dependable protection against overfilling

## Cost effective

Optimal utilization of the container volume

## User friendly

Simple setup and commissioning

## Liquid waste buffer tank

## Level measurement and point level detection in buffer tanks for liquid waste

In preparation for proper disposal, liquid wastes that arise in the production of pharmaceuticals are temporarily stored in buffer tanks. These potentially hazardous mixtures consist of diverse media with very different properties including dielectric conductivity (dielectric constant) and density. For optimal storage, reliable and accurate level measurement is required. Point level detection ensures overfill and dry run protection.

More details

## VEGAPULS 6X

Level measurement with radar in liquid waste buffer tanks

- Measurement down to the tank bottom, even in media with low dielectric constant
- Long service life thanks to highly resistant materials
- Due to false signal suppression, measuring result is not affected by agitators

Show Product

## VEGASWING 61

Vibrating level switch for dry run protection in a buffer tank for liquid waste

- Reliable detection of dry run ensures continuous process
- Dependable function through media-independent switching point
- Simple setup without adjustment

Show Product

## VEGASWING 63

Vibrating level switch for point level detection in liquid waste buffer tanks

- Reliable product-independent switch point
- Simple setup without adjustment
- Test key on the barrier device allows simple function check
