

Reliable

Better, consistent product quality, because of precise monitoring

Cost effective

Simple setup and commissioning, completely maintenance free

User friendly

Universal, media-independent measurement technology

Silage tank

Level measurement and point level detection in the storage tank for fish waste

Fish waste and scraps are the valuable raw material for fish silage, which in turn is a protein-rich raw material for the production of fish meal and dry fish feed. The acids used during production enable controlled growth of bacteria. The levels in the storage tanks must be carefully and reliably monitored. The visualisation of current process and storage status is handled by VEGA Inventory System.

More details

VEGAPULS 6X

Non-contact level measurement with radar in the silage tank

- Maintenance-free operation thanks to non-contact measuring principle
- Simple installation and setup
- Reliable measurement unaffected by foam and buildup

Show Product

VEGACAP 64

Capacitive level switch as overfill protection in the silage tank

- $\hbox{\color{red} \blacksquare Millimetre-precise detection of the switching point, independent of the consistency of the medium} \\$
- Reliable measurement unaffected by buildup and foam
- Long service life and low maintenance requirement through robust construction

Show Product

VEGA Inventory System

Software for data acquisition and visualisation of level data

- Easy access to live data around the clock
- Accurate, up-to-date information on tank levels
- Simplified management through a wide range of functions
- Fully automatic and timely notification of re-supply requirements
- Increased security of supply
