

#### Reliable

Reliable protection against overfilling

### **Cost effective**

Independent of product and process characteristics

### **User friendly**

Simple to set up and maintenance-free operation

# Tanks for solvents

# Level measurement, point level and pressure measurement in the storage and transfer of solvents

Low viscosity solvents can degrade many types of plastics. This places increased demands on the process instrumentation. A separate level detection system is required for protection against overfilling. It increases plant safety and ensures protection of human health and the environment.

### More details

# **VEGAFLEX 81**

Level measurement with guided radar in the solvent tank

- Different sealing and housing materials ensure long-term and maintenance-free operation
- Reliable measurement even with changing media and foaming
- The SIL qualification (SIL2/3) and the approval for substances hazardous to water (WHG) allow use as part of an overfill protection system or safety instrumented system
- Maintenance-free operation of the facility

Show Product

## **VEGABAR 82**

Pump pressure measurement with pressure transmitter in the pump line

- Robust ceramic CERTEC® measuring cell withstands pressure surges or vacuum shocks in the pump line
- The high resistance of the measuring cell and the various process fittings ensure long-term, maintenance-free operation
- Reliable level measurement qualified to WHG and SIL

**Show Product** 

### **VEGASWING 63**

Point level detection with vibrating level switch for overfill and dry run protection in the solvent tank

- Universally applicable for almost all liquids
- Additional safety thanks to glass feedthrough, which provides an additional process separation (Second Line of Defense)
- Simple setup without calibration
- Simple testing of the measuring system during operation via test button
