Maintenance-free operation

Compressor

Pressure measurement in air compressor systems

The air compressor system generates the necessary compressed air to transport the material from the silos via the network of feed pipes. To ensure a smooth, steady flow of material, reliable pressure monitoring in the compressors and conveying channels is required.

VEGABAR 82

Pressure transmitter for monitoring pressure in air compressor systems

- High plant availability ensured through high overload resistance of the ceramic CERTEC® measuring cell
- Reliable measurement, unaffected by pressure shocks
- Maintenance-free operation thanks to wear-free measuring cell
