

Reliable

Reliable measurement ensures optimal process flow

Cost effective

Maintenance-free measurement despite high temperatures

User friendly

Simple mounting and setup

Sintering plant

Level measurement in the sintering plant

After sintering, the hot material is cooled down to a temperature of about 150 °C in the sintering cooler. The feed rate of the sintering belt is controlled to ensure that the material is thrown off at the end of the sintering belt. To achieve effective cooling, the thickness of the material on the sintering belt has to be continuously and precisely measured.

VEGAPULS 6X

Non-contact radar level measurement on the sintering belt

- Reliable measurement, independent of temperature changes
- Wear and maintenance-free for high plant availability
- Easy antenna cleaning via purging air connection
