

### Reliable

Overfill protection increases plant safety

### Cost effective

Low maintenance costs, because non-moving parts

### User friendly

Unaffected by process conditions

## Fractionator

### Level measurement and point level detection in the fractionator

Accurate level control of the fractionator ensures product quality of the obtained hydrocarbons, but this is made difficult due to hot liquids flashing, buildup and high temperature. Even through quick process changes reliable level measurement and point level detection are required to ensure a smooth operation of the plant.

### VEGAFLEX 86

Level measurement with guided wave radar in the fractionator

- Non-moving parts are immune to mechanical failure
- Low maintenance requirements reduce downtime and costs
- Certain measurement even by changing process conditions

### VEGASWING 66

Vibrating level switch for monitoring high and low alarm in the fractionator

- Reliable measurement unaffected by high temperature and pressure
- Test function during operation provides higher plant availability
- Redundancy increases plant safety and availability
