High reliability and functional safety

Cost effective

Maintenance-free operation with simple calibration and proof testing

User friendly

Fast and easy installation and setup

Anhydrous ammonia storage tank

Level measurement and point level detection in the anhydrous ammonia storage tank

During the sulfur removal process, nitrogen is converted into ammonia through a water wash process to be sold for fertilizer production. Stringent environmental restrictions and the high hazard potential make secure control of the levels in ammonia handling processes absolutely necessary.

More details

VEGASWING 63

Vibrating level switch for overfill protection

- Setup without filling reduces installation efforts
- Metal sealing protects against diffusion
- Easy function test by simple pushing a button

VEGAFLEX 81

Level measurement with guided wave radar in the storage tank

- Front flush borosilicate glass seal provides uncompromising protection against diffusion
- Permeation resistance translates to freedom from maintenance and considerable savings
- Precise measurement results unaffected by boiling liquid surface or vapours
