

#### Reliable

Reliable measurement even during filling

#### **Cost effective**

Accurate measurement of the entire container volume

User friendly Simple mounting and setup

# Lime silo I

## Level measurement and point level detection in the lime silo

For flue gas desulfurization a continuous production of the lime milk is required, the lime is kept on hand in sufficient quantities in large silos. Lime tends to readily adhere to more or less anything, depending on its type and consistency, interfering with equipment like the operation of instruments. A robust, non-susceptible level measurement is therefore absolutely necessary for reliable lime logistics and stocking. That's why a non-contact measuring instrument that also works well in the very dusty environment is essential here.

#### More details

## **VEGAPULS 6X**

Non-contact level measurement with radar in the lime silo

- Non-contact, maintenance-free measurement
- High measurement certainty despite extreme dust generation
- · High operational reliability, even when water condenses on instrument

## **Show Product**

### **VEGAMIP 61**

Non-contact point level detection with radar in the lime silo

- Non-contact, maintenance-free measurement
- Very long service life and low maintenance requirements through robust design
- Simple measurement from outside the container
