

### Reliable

Reliable readings in spite of difficult measuring conditions

### Cost effective

Maintenance costs removed by air cleaning of antenna

### **User friendly**

One radar sensor for all silo sizes, simple to install

# 

# Ash silo

## Level measurement and point level detection in the ash silo

Large quantities of fibre waste are produced during paper production. These are dried and burned and the energy released during combustion is used as process heat or to generate electricity. The ash is stored in high silos to be later used as an additive in the building materials industry. When the ash silo is filled, a great amount of noise and dust is generated and the material forms large angles of repose and overhangs. Filling, emptying and transportation logistics are controlled through the level measurement system.

### More details

### **VEGAPULS 6X**

Radar level measurement for controlling the filling and emptying process in the ash silo

- Reliable measurement under difficult process conditions
- Easy alignment of the sensor with swivel mount and sensor app
- Good focusing allows retrofitting of sensor at any position

### **VEGACAP 64**

Capacitive point level detection for overfill protection

- Reliable switching signals even under difficult process conditions
- Function unaffected by buildup
- Long service life thanks to robust construction
