

Reliable

Reliable measurement despite strong dust generation

Cost effective

Exact position monitoring without mechanical wear

User friendly

Maintenance and wear-free

Stacker

Detecting the position of the stacker in the blending bed

To maintain a high quality and uniform material consistency in the finished cement, the raw materials are homogenized in a blending bed. To achieve this the rock is distributed evenly over the blending bed with a stacker. Material is reclaimed in reverse order with the help of a scraper. In order to optimally control the conveyor systems, their positions must be determined as precisely as possible.

VEGAPULS 6X

Profile and distance measurement with radar on the stacker

- Reliable measurement, unaffected by dust and noise
- Maintenance-free operation through non-contact measuring method
- Simple mounting and setup
