

Reliable

Reliable and redundant measurement even under extreme process conditions

Cost effective Maintenance-free operation

User friendly Simple setup

Preflash drum

Preflash drum

In the preflash drum, the medium is heated before it is fed into the distillation column. Accurate and reliable level control is a critical factor in ensuring efficient operation of the distillation column. Reliable measurement of the level prevents overfilling of the vessel and also keeps the pumps from running dry.

More details

VEGAFLEX 86 and magnetic level indicator

Combination measuring system for field visualization and continuous level measurement

- Redundant measurement through the combination of guided radar sensor and magnetic level indicator
- High-quality materials increase durability under extreme process conditions
- Reliable measured values even with unstable liquid levels
