

Safe

Approved materials according to FDA and EC 1935/2004

Cost effective

Maintenance-free operation

User friendly

Compact design facilitates easy installation

Autoclave

Pressure monitoring and point level detection in the autoclave

The aluminium cans are sterilised with steam at a temperature of 120 °C and a pressure of 3 bar in an autoclave. Then, while the cans are still in the autoclave, they are cooled down with water to a temperature between 35 °C and 40 °C. They are dried and further cooled before being stacked in the warehouse. To enable a safe, optimal autoclaving process, pressure and limit level are measured.

[More details](#)

VEGASWING 51

Vibrating level switch for detecting the water level in the autoclave

- Exact, reliable measurement through product-independent switching point
- Minimal time and cost expenditure thanks to simple setup without medium
- Optimal control of the inlet and outlet valves

[Show Product](#)

VEGABAR 38

Pressure transmitter for monitoring the steam pressure in the autoclave

- Robust measuring cell is resistant to sterilisation processes
- Reliable measurement, unaffected by steam and condensate
- Precise process control thanks to fast response time

-

Process temperature

-40 ... 150 °C

Process pressure

-1 ... 64 bar

Version

Standard
 Extended temperature range
 Hygienic applications

Materials, wetted parts

316L

Threaded connection

≥ G½, ≥ ½ NPT

Hygienic fittings

Clamp ≥ 1" - DIN32676, ISO2852
 Slotted nut ≥ DN25 - DIN 11851
 hygienic fitting F40 with compression nut
 SMS DN38

Seal material

no media contact

Housing material

Plastic
 Stainless steel

Protection rating

IP67
 IP65
 IP68 (0,2 bar)
