

Safe

Approved materials according to FDA and EC 1935/2004

Cost effective Maintenance-free operation

User friendly Compact design facilitates easy installation

Autoclave

Pressure monitoring and point level detection in the autoclave

The aluminium cans are sterilised with steam at a temperature of 120 $^{\circ}$ C and a pressure of 3 bar in an autoclave. Then, while the cans are still in the autoclave, they are cooled down with water to a temperature between 35 $^{\circ}$ C and 40 $^{\circ}$ C. They are dried and further cooled before being stacked in the warehouse. To enable a safe, optimal autoclaving process, pressure and limit level are measured.

More details

VEGASWING 51

Vibrating level switch for detecting the water level in the autoclave

- · Exact, reliable measurement through product-independent switching point
- Minimal time and cost expenditure thanks to simple setup without medium
- Optimal control of the inlet and outlet valves

Show Product

VEGABAR 38

Pressure transmitter for monitoring the steam pressure in the autoclave

- Robust measuring cell is resistant to sterilisation processes
- Reliable measurement, unaffected by steam and condensate
- · Precise process control thanks to fast response time
