

#### Reliable

Reliable measurement even with strong dust generation

Cost effective Optimum storage capacity utilization

User friendly Maintenance and wear-free

# Blending bed

### Level measurement of the blending bed

To attain high quality and uniform material consistency in the finished cement, the raw material is homogenized in a so-called blending bed. The rock is distributed evenly over the blending bed with a stacker. Material is removed with a scraper. To ensure that the incoming material is distributed as evenly as possible, the level must be continuously measured.

#### More details

## **VEGAPULS 6X**

Level measurement with radar in the blending bed

- Precise measurement through good focusing
- High measurement certainty, even with intense dust and noise generation
- Maintenance-free operation thanks to encapsulated antenna system
