

Reliable

Redundant measurement increases plant availability and plant safety

Cost effective Maintenance-free operation

User friendly Easy installation and setup

Propane bullets

Level measurement in propane bullets

Propane, a flammable, colourless and odourless gas, is one of the many types of liquefied petroleum gases (LPG) that exist. It is produced from natural gas via a special refining process. Propane is compressed, liquefied and stored in pressure vessels so that it does not return to a gaseous state. To ensure optimal storage, reliable level measurement is required.

More details

VEGAFLEX 81 and magnetic level indicator

Guided wave radar and magnetic level indicator for reliable level measurement

- Redundant measurement through the combination of guided radar sensor and magnetic level indicator
- Measurement is unaffected by low dielectric constant
- Equipment can be isolated from vessel for service without affecting the process

Show Product

Differential pressure transmitter for redundant measurement

- High reliability through integrated overload diaphragm
- Measurement of very low differential pressures through high precision measured value detection
