

#### Reliable

Reliable function even during filling

#### **Cost effective**

Dry run protection prevents failures or damage to the eccentric pumps

#### **User friendly**

Easy alignment via optional adjustable sealing gaskets

# Starch silo

# Level measurement in starch silos and dry run protection for starch liquefaction vessels

Starch is an important additive to increase the strength of the paper. The raw starch is stored in tall, narrow silos. Filling is carried out pneumatically, generating large amounts of dust. They are discharged into the starch slurry production system beneath the silo and the resulting slurry is pumped into the starch cookers by eccentric pumps. For optimal control of the silo filling process, a reliable level measurement is required. To prevent the eccentric pump from running dry, an in-line switch is needed upstream of the pump.

#### More details

# **VEGAPULS 6X**

Level measurement with radar in the starch silo

- · Maintenance-free operation through non-contact measuring method
- Precise alignment and measurement even in high, narrow Silos
- Reliable measurement despite dust

# **Show Product**

### **VEGASWING 61**

Vibrating level switch as a universal dry run protection for eccentric pumps

- Small process fittings, short fork also suitable for small pipe diameters
- Easy setup and commissioning because adjustment-free
- Reliable measurement thanks to product-independent switching point

#### **Show Product**
