Simple installation and commissioning

Salt silo

Level measurement in the road salt silo

During the winter season the highways and road maintenance departments safeguard the roads, public squares and pedestrian paths by clearing off snow and ice. The quantities of road salt required are stored in silos and when needed, loaded onto snowploughs. Reliable level measurement is necessary for the optimal and adequate stocking of the salt. The stock level information is transmitted to the central control centre.

VEGAPULS Air 42

Road salt silo inventory measurement with autarkic radar level sensor

- Precise measurement data is maintained, despite extreme dust generation and deposits on the sensor face
- Simple retrofitting and installation is facilitated by battery power and wireless communication technology
- Reliable measured values ensure optimal and timely resupply

VEGA Inventory System

Software for acquisition and visualization of level data.

- Easy access to live data around the clock
- Accurate, up-to-date information on filling levels
- Numerous functions simplify inventory management
- Fully automatic and timely notification of replenishment requirements
- Increased security of supply

Measuring range - Distance
30 m

Process temperature
-20 ... 60 °C

Process pressure
-1 ... 2 bar

Accuracy
± 2 mm

Frequency
80 GHz

Beam angle
4°

Materials, wetted parts
PVDF

Flange connection
≥ DN80

Seal material
EPDM
FKM

Housing material
Plastic
