

Reliable

Certified hygienic design (3A/EHEDG) and approved materials according to EC 1935/2004 and FDA

Cost effective

Certified hygienic design of the sensors reduces cleaning time

User friendly

Simple connection via standardised IO-Link

Yeast separator

Pressure and limit level measurement in the yeast separator

After leaving the fermentation tank, the green beer is fed to the separator. There, a large part of the yeast is removed before filtration. To ensure a continuous supply to the separator, the pressure in the green beer supply line is monitored. A level detection system monitors the separated yeast, which settles in the lower part of the separator, and controls the cleaning process.

More details

VEGABAR 29

Pressure transmitter with I/O link connection for pressure monitoring in the green beer inlet

- Good cleanability thanks to hygienic design
- Accurate process control thanks to fast response time
- Compact design facilitates installation

Show Product

VEGABAR 39

Pressure transmitter with I/O link connection for pressure monitoring in the discharge line for green beer.

- Simple operation thanks to VDMA menu structure together with easy-to-read display and Bluetooth communication
- Accurate process control thanks to fast response time
- Good cleanability thanks to hygienic design

Show Product

VEGAPOINT 24

Capacitive level switch with IO-Link connection for point level monitoring for yeast discharge

- Reliable switching point, insensitive to buildup and yeast foam
- Good cleanability thanks to hygienic design
- 360° display of the switching status
