

Reliable

Exact level measurement in abrasive and aggressive seawater

Cost effective

Low installation and integration costs

User friendly

Maintenance-free operation due to seawater resistant materials

Ballast water tanks

Level measurement in the forepeak, wing and double bottom tanks with ballast water

The ballast water measurements in the wing and double bottom tanks go directly into the control system for the ship trim, draught and list. Since these measuring points are virtually inaccessible during operation on board, reliability and stability are an absolute must. Pressure shocks, abrasive sand particles and seawater place additional heavy demands on the instrumentation.

More details

VEGAWELL 52

Hydrostatic submersible pressure transmitter for level measurement in the ballast water tank

- Reliable, durable and robust, seawater-resistant sensors
- Ceramic measuring cell for exact and long-term stable measurement, even
 with pressure shocks and abrasion
- Simple installation from above or the side

Show Product

VEGABAR 28

Hydrostatic pressure sensor for level measurement in the ballast water tank

- Reliable measurement, long service life
- User-friendly, wireless setup and diagnostics with smartphone
- Easy to install lateral mounting arrangement
