

Reliable

Simple function test possible even during a running process

Cost effective

Ensures optimal supply of flocculants

User friendly

Simple calibration

Storage tank for flocculant

Level measurement and point level detection in flocculant storage tanks

The finest impurities in the water are bound together through flocculation. This allows the coagulated materials to be removed from the water by sedimentation or filtration. The flocculant required for such operation is stored in a reserve tank. A continuous level measurement ensures a sufficient supply of flocculants. The point level detection serves as overflow protection in the tank.

More details

VEGAPULS 31

Flocculant storage tank level measurement with radar

- Maintenance-free operation through non-contact measurement
- Reliable level monitoring through the vessel top, thanks to strong focusing
- Universally applicable for different flocculants

Show Product

VEGASWING 63

Point level detection with vibrating level switches for overfill protection

- Highly robust materials are resistant to aggressive media
- Fast and reliable function test by simply pressing a button
- Simple setup without adjustment
