IBC containers with cleaning agents

Level measurement in IBC containers storing cleaning agents

Water and cleaning agents are used to efficiently clean the feed pellet containers. These media are stored on site, for example on a feeding barge or on a supply ship. Reliable level measurement ensures that the required amount of cleaning agent is available at all times. And this in turn guarantees that the feed pellet containers are cleaned quickly in the time between complete emptying and the next filling.

VEGAPULS Air 23

Autarkic radar sensor for non-contact level measurement in IBC containers

- Precise measurement right through the container top, using 80-GHz radar technology
- Exact measured values regardless of the medium
- Autarkic sensor with own power supply and wireless transmission of measured values

VEGA Inventory System

Software for data acquisition and visualisation of level data

- Easy access to live data around the clock
- Fully automatic and timely notification of re-supply requirements
- Simplified management through a wide range of functions

VEGAPULS Air 23[Show Product](#)**Measuring range - Distance**

3 m

Process temperature

-20 ... 60 °C

Accuracy

± 5 mm / ± 0.2"

Frequency

80 GHz

Beam angle

8°

Threaded connection

via adhesive, ceiling or tension belt mounting

Housing material

Plastic / PVDF

Protection rating

IP69

Output

NB-IoT (LTE-Cat-NB1), LTE-M (LTECAT-M1), LoRa WAN

Ambient temperature

-20 ... 60 °C
