

Reliable

Reliable measurement even in dusty and noisy environments

Cost effective Optimal storage capacity

User friendly Maintenance-free operation of the facility

Buffer and production silos

Level measurement in buffer and production silos

After crushing and screening, the different aggregates are transported via conveyor belts and distributed among the silos. Before further processing, the stones, gravel or rock flour are stored in buffer and production silos. To ensure optimal material storage, a precise level measurement is required.

More details

VEGAPULS 6X

Non-contact Level measurement with radar in buffer and production silos

- Reliable measurement, independent of dust, abrasion and product moisture content
- Maximum operational reliability through insensitivity to noise
- Maintenance-free non-contact measurement
