

Reliable

Certified materials in compliance with FDA and EC 1935/2004

Cost effective

Three instruments, four measured values:

Pressure, level, temperature and point level

User friendly

Low installation expenditure

Reaction vessel with solvents

Level and pressure measurement and point level detection in mixing processes

The key component in the manufacture of pharmaceutical products is the reactor. Different raw materials are mixed with solvents and made to react by applying heat and pressure. During this process, the pressure, temperature and consistency of the medium are changing constantly. A stirrer ensures homogeneous mixing of the product, and can also cause an agitated surface and heavy foaming. To ensure a reliable process, the liquid level in the reaction vessel must be reliably and continuously monitored.

More details

VEGAFLEX 83

Guided radar sensor for level measurement

- Easy installation in restricted installation situations thanks to segmented rods
- Reliable measurement despite strong foam generation
- Hygienic, gap-free design ensures easy and reliable CIP and SIP cleaning

Show Product

VEGABAR 83

Pressure transmitter for monitoring pressure

- Unaffected by internal fixtures such as agitators or heating coils
- Unaffected by foaming

Show Product

VEGASWING 61

Vibrating level switch for point level detection

- Reliable measurement, independent of process parameters
- Adaptable to any medium through special coatings, e.g. glass and polymer
