

Reliable

Reliable measurement of volatile substances

Cost effective

Simple and maintenance-free operation

User friendly

Simple bypass installation

Ammonia separator

Level measurement and point level detection in the ammonia separator

In the ammonia separator, the reaction gas mixture (ammonia, hydrogen, nitrogen, traces of methane) is cooled to the boiling point of ammonia (-33 °C). This condenses the ammonia gas. A bypass tube is typically used for measuring the level of the condensed ammonia. In addition, a limit switch is also installed directly in the vessel as a redundant measurement.

More details

VEGAFLEX 81

Level measurement with guided radar in the separator

- Protection against diffusion by ammonia by means of a special sealing concept integrated in the sensor
- Shortenable sensors enable individual adaptation
- Precise measurement data despite condensate
- Available for up to SIL2

Show Product

VEGASWING 63

Vibrating level switch as overfill protection in the separator

- Optimal protection thanks to "Second Line of Defense"
- Simple setup without calibration
- Precise, reliable function through product-independent switching point
