

Reliable

High operational reliability by reliable measurement, even with high pulp densities

Cost effective

Maximum utilization of bleaching tower volume

User friendly

Minimal servicing thanks to non-contact, maintenance-free measurement

Bleaching tower

Level measurement and point level detection in the bleaching tower

In order to achieve the desired degree of whiteness, the pulp must be bleached. For this it is filled into the 25 meter high bleaching tower. The bleaching process runs continuously at temperatures up to 95 °C, with using chemicals such as oxygen, ozone or peroxide. The bleached pulp is discharged via screw conveyors. Due to its size, the bleaching tower is never emptied. Continuous level measurement enables a smooth process flow.

More details

VEGAPULS 6X

Non-contact level measurement with radar in the bleaching tower

- Rinsing air connection on the sensor prevents buildup
- Reliable measurement, even with fluctuating pulp density
- Wear and maintenance-free

Show Product

VEGABAR 82

Hydrostatic level measurement for controlling stock discharge

- Front-flush installation in the ball valve fitting
- Robust ceramic for long-term use
- High measurement accuracy, even with small measuring ranges

Show Product

VEGACAP 64

Capacitive level detection as protection against overfilling

- Reliable function despite adhesive medium
- High-quality materials ensure good chemical resistance
- Maintenance-free
