

Reliable

Reliable measuring results even at high process temperatures

Cost effective Accurate charging of the lime kiln

User friendly Maintenance-free operation

Lime kiln

Level measurement in the lime kiln

A lime kiln is used to produce quicklime through the calcination of limestone. Here the furnace is filled from the top and the calcined limestone (quicklime) is collected at the bottom of the furnace. Accurate level measurement ensures optimal charging and hence efficient operation of the furnace.

More details

VEGAPULS 6X

Non-contact level measurement with radar in the lime kiln

- Reliable measuring results ensured, even at high temperatures
- No additional cooling system necessary
- Continuous operation of the plant ensured, because wear and maintenancefree
