

#### Reliable

Approved materials in compliance with FDA and EC 1935/2004

#### Cost effective

Monitoring of the diatomaceous earth filter ensures continuous operation

#### **User friendly**

Easy diagnosis thanks to Bluetooth communication

# Diatomaceous earth filter

# Differential pressure and limit level measurement in the diatomaceous earth filter

After a large part of the yeast has already been filtered out in the separator, the brew leaves the green beer storage tank and is pumped into the diatomaceous earth filter for filtration. Here, the remaining yeast cells and other substances causing turbidity are removed with the help of diatomaceous earth, which clarifies the beer. The limit level is detected in the diatomaceous earth storage tank. If necessary, diatomaceous earth is added to the diatomaceous earth filter via water inflow. The degree of contamination of the diatomaceous earth filter is monitored by an electronic differential pressure measuring system.

#### More details

# **VEGABAR 82**

Electronic differential pressure measurement for filter monitoring

- High resistance to abrasive diatomaceous earth thanks to ceramic CERTEC® measuring cell
- Long-term stable and reliable thanks to moisture-proof measuring cell
- Simple installation, since differential pressure lines are unnecessary

## **Show Product**

# **VEGAPULS 42**

Compact radar sensor for non-contact level measurement in the diatomaceous earth storage tank

- Maintenance-free operation thanks to non-contact measuring principle
- Simple automation and integration options thanks to IO-Link
- Compact design allows installation even in very small vessels
