

Reliable

Certified materials according to FDA and EC 1935/2004 regulations

Cost effective

Short delivery time and standardized operation thanks to plics® concept

User friendly

Simple installation due to small dimensions

Ice cream "Premix" mixer

Level and pressure measurement during the mixing of ice cream ingredients

The ingredients for making ice cream are accurately weighed and fed into a mixing tank, where the "premix" is made. Afterwards, the premix is passed through the homogenizer at a pressure of about 140 bar and then pasteurized at 80 °C. The level in the premix vessel and the pressure in the pipeline leading to the homogenizer need to be continuously monitored to ensure continuous ice cream production.

More details

VEGAPULS 42

Continuous level measurement with radar in the "premix"

- Non-contact measurement, independent of agitators due to tight focussing, even in the smallest of containers
- Compact design allows installation even in very small vessels
- Reliable measurement, immune to the formation of condensation

Show Product

VEGABAR 83

Pressure transmitter for monitoring pressure in a homogenizer

- Robust diaphragm easily handles high pressures
- Resistant to vacuum during the cleaning cycle
