

### Reliable

Reliable function despite abrasive

## **Cost effective**

Automatic operation ensures optimum level at all times

User friendly Maintenance-free operation

# Wet deslagger

## Level measurement in the wet deslagger

The hot, burned-out slag falls into the water quenching bath of the deslagger. A mechanical discharge mechanism pushes the slag out and, while doing so, presses out most of the entrained water. Evaporation and slag removal cause a steady loss of water. For that reason the water level in the deslagger has to be measured and replenished as required.

### More details

## **VEGAPULS 6X**

Level measurement with radar in the wet deslagger

- Precise measurement of small level differences
- Non-contact measurement unaffected by abrasion
- Exact measurement results even with density changes
