

Reliable

Reliable measurement of the waste volume

Cost effective

Robust measuring technology ensures long, maintenance-free operation

User friendly

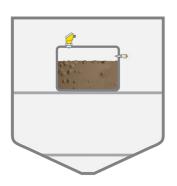

Simple installation and setup

Service tanks with grey and black water

Level measurement in tanks with grey or black water

Waste water, known as grey/black water on ships, is treated on board larger vessels using ship-board clarification plants or it may be stored in special grey/black water tanks to await final disposal. Direct electrical measuring principles are mandatory for level measurement.

More details

VEGAPULS 21

Level measurement with radar in grey or black water tanks

- Reliable measurement by means of non-contact measuring method, even with liquids containing solids
- Easy installation thanks to the small process fitting

Show Product

VEGAPOINT 21

Capacitive point level sensor for point level detection in the service tank

- Compact design enables mounting in virtually any position
- Low-cost level switch with extremely small installation dimensions
