Reliable

Exact filling height is important for a smooth operation

Cost effective

Reliable measurement ensures safe and efficient loading and unloading so vessels have a good uptime
User friendly

Maintenance free operation

Slop tank

Level measurement in the slop tank

Usually a ship has two slop tanks, portside and starboard. This tank contains the water from the cleaning processes on a ship. Especially after sailing the procedure of tank cleaning is processed and the slob tanks are filled with wash water. It includes chemicals, edible oils or other products. A level measurement is important to ensure a reliable cleaning process.

More details

VEGAFLEX 81

Level measurement with guided wave radar in the slop tank

- Precise measurement close to the bottom and tank top
- Reliable measuring values unaffected by foam and small product layers
- Shortenable probes offer a simple standardization and highest flexibility in the planning
