## BTX separators

### Level measurement and point level detection in the BTX separators

Precise interface monitoring in refinery separators is critical to product quality because it confirms there is complete separation. For liquid-liquid interface in a BTX (benzene, toluene, xylene) separator, an accurate measurement helps control the quality of the separator's output and thus helps to extend equipment life in downstream units by avoiding potentially expensive operating issues.

#### VEGASWING 63

Vibrating level switch for overflow protection in BTX separators

- High level switch provides redundancy
- Maximum flexibility through switching point adaptable to the application
- Switching point is unaffected by media properties

#### VEGAFLEX 81 and magnetic level indicator

Guided wave radar sensor and magnetic level indicator for monitoring of the separation layer

- Guided wave radar and magnetic level indicator provide redundancy
- Dual measurement capability provides both total level and interface level
- Continuous reporting increases operational efficiency
