

Reliable

Redundant measurement for highest safety standards

Cost effective

Maintenance-free operation

User friendly

Easy installation

BTX separators

Level measurement and point level detection in the BTX separators

Precise interface monitoring in refinery separators is critical to product quality because it confirms there is complete separation. For liquid-liquid interface in a BTX (benzene, toluene, xylene) separator, an accurate measurement helps control the quality of the separator's output and thus helps to extend equipment life in downstream units by avoiding potentially expensive operating issues.

More details

VEGASWING 63

Vibrating level switch for overfill protection in BTX separators

- High level switch provides redundancy
- Maximum flexibility through switching point adaptable to the application
- Switching point is unaffected by media properties

VEGAFLEX 81 and magnetic level indicator

Guided wave radar sensor and magnetic level indicator for monitoring of the separation layer

- Guided wave radar and magnetic level indicator provide redundancy
- Dual measurement capability provides both total level and interface level
- Continuous reporting increases operational efficiency
