

#### Reliable

Reliable measuring results even at high temperatures

Cost effective Optimal utilization of storage capacity

User friendly Simple installation

# Silo for ready mixed asphalt

# Level measurement and point level detection in ready mixed asphalt silos

Different qualities are required from the asphalt depending on the usage and climatic conditions, so every asphalt mixture varies depending on the application. Asphalt is always extremely viscous, hot and highly adhesive. Due to these properties and the numerous different asphalt mixtures, reliable level measurement and point level detection methods are essential.

#### More details

## **VEGAPULS 6X**

Non-contact level measurement with radar in mixed asphalt loading silos

- · Reliable measurement, independent of condensation and high temperatures
- Easy alignment of sensor with integrated swivel mount and app for smartphones
- Maintenance-free, as non-contact measuring method

## **Show Product**

# **VEGACAP 65**

Capacitive overfill protection in mixed asphalt loading silos

- Long service life, thanks to robust mechanical construction
- Unaffected by buildup, condensate and high temperatures
- Reliable switching point through use of large gravity weight
