

Reliable

Reliable measurement despite changing process conditions

Cost effective

Optimum utilization of the vessel volume

User friendly

Complete, safe and automated operation of the facility

Receiving tank for hazardous waste

Level measurement and point level detection in a receiving tank

Hazardous waste can include lacquers, paints and thinners, as well as acids, alkalis and mixtures. At hazardous waste treatment facilities, environmentally harmful substances are converted into environmentally safe ones. Before treatment, the liquid hazardous waste is collected in receiving tanks. Level measuring systems ensure the automated, monitored operation of the facility, thereby protecting human health and the environment.

More details

VEGASWING 63

Vibrating level switch for leakage detection in the receiving tank

- Reliable detection of leaks in the wall of the receiving tank
- Fast and reliable function test via simple keypress
- Simple installation and setup

Show Product

VEGACAP 63

Capacitive point level detection in the receiving tank

- Maintenance-free overfill protection of the receiving tanks
- Exact and reliable function through product-independent switching point

Show Product

VEGAPULS 6X

Level measurement with radar in the receiving tank

- · Maintenance-free thanks to non-contact measurement of all media
- Small minimum distance, no mounting socket required
- Encapsulated antenna system ensures continuous availability
