

Reliable

Certified materials according to FDA and EC 1935/2004 regulations

Cost effective

Accurate monitoring ensures a continuous process

User friendly

Bluetooth communication facilitates diagnosis

Level, pressure and limit level measurement in the green beer storage tank

After fermentation and after a large part of the yeast has already been removed in the separator, the green beer is placed in storage. Here it is continuously cooled. The green beer is then pumped into the filtration system. In the green beer storage tank, the overpressure, the limit level and the actual level are continuously monitored.

More details

VEGABAR 82

Pressure transmitter for monitoring overpressure in the green beer storage tank

- Ceramic CERTEC® measuring cell is resistant to cleaning cycles
- Reliable measurement, unaffected by condensate formation thanks to encapsulated measuring cell
- Good cleanability via flush mounting sensor design

Show Product

VEGABAR 28

Pressure transmitter for pressure monitoring in the cooling water pipeline

- Ceramic CERTEC® measuring cell is totally resistant to cooling water
- Exact measured values despite condensation formation, thanks to encapsulated measuring cell
- Good cleanability thanks to flush mounting

Show Product

VEGAPOINT 21

Capacitive level switch as overfill and dry run protection in the green beer storage tank

- 360° switching status display for easy recognition of switching status
- Compact design facilitates cleaning
- Reliable measurement, even with condensation formation

Show Product

VEGAPULS 6X

Continuous level measurement with radar in the green beer storage tank.

- Reliable measurement despite cooling coils, thanks to strong focussing
- Exact measured values, even with formation of condensation
- . Very good cleanability thanks to flange with encapsulated antenna system
