

#### Reliable

Reliable content measurement in the fly ash silo

#### Cost effective

Maintenance-free operation through noncontact measurement

#### **User friendly**

Simple mounting and setup

# Fly ash silo, ash bunker

## Level measurement and point level detection in the fly ash silo or bunker

The burning of coal creates huge quantities of ash. It is collected in a silo or bunker and then dumped into an open pit. To determine the filling height, radar transmitters and level detectors are deployed in the respective vessels.

#### More details

#### **VEGAWAVE 63**

The vibrating level switch dependably prevents an overfilling of silos and bunkers

- Product-independent switching point, thus ideal for bulk solids
- Robust design ensures minimal costs for maintenance and repair
- Approved according to Ex and SIL2

#### **Show Product**

### **VEGAPULS 6X**

In silos and bunkers, radar sensors are mainly used to determine the filling height

- High plant availability thanks to wear and maintenance-free measuring instrument
- Non-contact measurement; unaffected by steam, dust and noise
- Ideal for measurement of bulk solids in high silos and bunkers
