

Reliable

Certified materials according to FDA and EC 1935/2004 regulations

Cost effective

Continuous filling process, thanks to a reliable measurement

User friendly

Simple installation and setup

Supply tank of a filling machine

Level measurement and point level detection in the supply tank of a filling machine

Yoghurt is stored in the supply tank of the filling machine. Reliable level measurement and point level detection are important for maintaining the filling process. A point level sensor is also used to prevent dry running of the supply to the machine.

VEGAPULS 42

Non-contact level measurement with radar in the filling machine

- Maintenance-free operation thanks to non-contact measuring principle
- Simple automation and integration options thanks to IO-Link
- Compact design allows installation even in very small vessels
