

Reliable

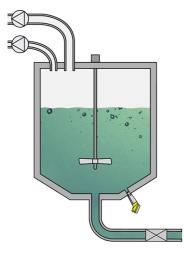

Reliable level measurement despite extreme temperature changes

Cost effective

Accurate measurement even in small tanks

User friendly

Sensor removal during tank cleaning not necessary

VEGABAR 38

Batching tank for coatings

Level measurement in the coating batching tank

Hydrostatic level measurement in the batching tank

- Rapid temperature change is compensated by oil-free ceramic measuring cell
- Small measuring ranges for accurate measurement even with very low levels
- Particularly robust, not affected by mechanical cleaning

The press rolls are cleaned during product changes or shutdowns of the paper machine and then treated

with a special coating agent. This protects them from adhesions and deposits that could cause the paper

web to tear or split in the machine. The coating agent is mixed with hot water in a batching tank at a
