

Reliable

The level is reliably detected, even under layers of foam

Cost effective

Maintenance-free operation thanks to noncontact measuring principle

User friendly

Simple installation and setup

Mash tun

Level measurement in the mash tun

The crushed malt is mixed with brewing water to create the mash. The mixture is heated in the mash tun and the natural enzymes convert the insoluble grain starch into soluble malt sugar. During the process, all the malt ingredients important for the beer are transferred to the brewing liquor. The end product is then clarified, separating the enriched brewing liquor from the solids. Continuous level measurement is required during the cooking process.

More details

VEGAPULS 6X

Level measurement with radar in the mash tun

- Exact measuring results independent of process conditions
- Trustworthy measuring results despite foam and condensate
- · High plant availability, because wear and maintenance free
