

#### Reliable

The level is reliably detected, even under layers of foam

## Cost effective

Maintenance-free operation thanks to noncontact measuring principle

### **User friendly**

Simple installation and setup

# Mash tun

## Level measurement in the mash tun

The crushed malt is mixed with brewing water to create the mash. The mixture is heated in the mash tun and the natural enzymes convert the insoluble grain starch into soluble malt sugar. During the process, all the malt ingredients important for the beer are transferred to the brewing liquor. The end product is then clarified, separating the enriched brewing liquor from the solids. Continuous level measurement is required during the cooking process.

## More details

# **VEGAPULS 6X**

Level measurement with radar in the mash tun

- Exact measuring results independent of process conditions
- Trustworthy measuring results despite foam and condensate
- High plant availability, because wear and maintenance free
